#### 1 OVERVIEW

**HGM9420N\_HGM9420LT** genset controller is used for automatic control of single genset to realize automatic start/AMF/synchronous transfer/cloud monitoring. This series of controller integrates digitalization, intelligence, and network technology. It fits with LCD graphic display, optional Chinese, English and other languages interface, and it is reliable and easy to use.

**HGM9420N\_HGM9420LT** genset controller applies 32-bit microprocessor technology, realizing precise measuring of many parameters, value adjusting, and timing, threshold adjusting etc. functions. A majority of parameters can be adjusted from the front panel. All parameters can be adjusted via USB or RS485 port on PC. Controller fits with SAE J1939 port, which can communicate with multiple ECU (ENGINE CONTROL UNIT) units with J1939. With compact structure, simple wiring, and high reliability, it can be used in various genset automation systems.

**HGM9420N\_HGM9420LT** genset controller can connect with SGE02-4G network communication expansion module, which can make genset connected with Internet. After controller is logged in cloud server, it can upload the data information (includes: GPS positioning site, altitude etc.) at real time to the corresponding cloud server. Users can monitor and check genset running status and event log at real time by mobile APP (IOS or Android), or PC similar terminal device. Network communication module has SMS message function.

#### 2 PERFORMANCE AND CHARACTERISTICS

**HGM9420N\_HGM9420LT**: fits Mains-Gen power monitoring for Mains/Gen automatic transfer control (AMF). It is used for single unit automation system formed by one Mains and one Genset. Mains can be disabled by disabling mains parameters for single unit automation. By remote start signal genset auto start and stop can be controlled. Mains can be enabled only by setting mains parameters to realize mains parameter only display; by remote start signal genset auto start and stop can be controlled. Synchronous transfer function can be enabled to realize Gen and Mains synchronous transfer function. Main characteristics are as below:

240x128 LCD with backlight, multilingual interface (including English, Chinese or other languages)
 which can be chosen at the site, making commissioning convenient for factory personnel; For other languages language package needs to be written by PC software;

Language packages include: Simplified Chinese, Traditional Chinese, English, Spanish, Portuguese,
 Russian, Arabic, Turkish, Thai, French, Polish, German, Italian, Dutch;

2 RS485 and 1 RJ45 Ethernet communication port, "4 remotes" (remote control, remote measuring, remote communicating, and remote adjusting) can be realized by MODBUS protocol;

- 1 Fn function key, can be set to other function on the panel, or Fn key function;

Suitable for 3-phase 4-wire, 3-phase 3-wire, single phase 2-wire, and 2-phase 3-wire systems with voltage 120/240V and frequency 50/60Hz;

 Collects and shows 3-phase voltage of Mains/Gen, 3-phase current, frequency, load power and Gen voltage harmonic parameters;

Mains		
Line voltage	Uab, Ubc, Uca	
Phase voltage	Ua, Ub, Uc	
Frequency	Hz

Apparent power		S
Power factor		PF
Gen total energy		kWh, kvarh, kVAh
Earth current		A
Unbalanced current		A

Version 1.0

GCI

Load output percentage	(active power/rated power)x100%
Average load of current run	kW
Total energy of current run	kWh
Average load of last time	kW
Historical max average load	kW

— Mains has over voltage, under voltage, over frequency, under frequency, loss of phase, reverse phase sequence function; Gen has over voltage, under voltage, over frequency, under frequency, over current, over power, reverse power, loss of phase, reverse phase sequence, unbalanced voltage high, waveform distortion high, earth fault, unbalanced current high, power factor low, loss of excitation detection function;

Synchronous transfer enabled parameters: voltage difference of Gen and Mains, frequency difference of Gen and Mains, phase angle difference of Gen and Mains;

- Collect precisely various parameters of engine:

Temperature	Unit: °C/°F	
Oil pressure	Unit: kPa/psi/bar	
Fuel Level	Unit: %	
Speed	Unit: r/min (RPM)	
Battery voltage	Unit: V	
Charger D+ voltage Unit: V		
Total run time	max 65535 hours	
Total start times	max 65535 times	

Control and protection function: automatic start/stop of the diesel genset, ATS(Auto Transfer Switch)
 control and perfect fault indication and protection function etc.;

— Parameter setting function: parameters can be modified by users and cannot be lost even in case of power outage; most of them can be adjusted from the front panel of the controller and all of them can be modified on PC by USB, RS485 port, or RJ45 Ethernet port;

- 3 fixed analogue sensor inputs (temp., oil pressure, fuel level);

- 3 configurable sensors can be set to temp., pressure, or level sensor;

 Oil pressure sensor, level sensor, flexible sensor 1, flexible sensor 2 inputs can directly connect resistance, voltage, or current sensor; other sensor inputs can connect resistance sensor; if voltage or current type sensors need to connect, please notify us before order;

 Multiple temp., pressure, and fuel level sensor curves can be used directly, and custom sensor curve can be done;

- Multiple crank disconnect conditions (speed, engine oil pressure, gen frequency) are optional;

— Wide power supply range DC(8~35)V, suitable for different starting battery voltage environment;

Event log, real-time clock, scheduled start & stop function (allowing to start the genset once a day/week/month with load or not); cyclic start function of two gensets is fitted;

- Alarm data record function, which allows to record the genset data of 5 alarms;

 A USB Host port, where U flash of FAT32 format can be inserted, can put controller configured parameters to the controller, or save controller parameters to the U flash; Historical data can be saved;

Accumulative total run time of A and B and total electric energy of A and B; Users can reset it as 0 and re-accumulative the value, making convenience for users to count the total value as they wish;

- Heater, cooler and fuel pump control functions;

Applicable for water pump genset; it can also be used as an indicating instrument (only indication, alarm, no action for relays);

Maintenance function; 3 groups of maintenance parameters, maintenance time, pre-alarm A time,
 pre-alarm B time, pre-alarm time due action, and maintenance time due action can be set;

- By judging DC voltage, auto charging start function can be realized;

 Through CAN (2) port or RS485 (2) port cyclic start function of two gensets can be realized; master run time and backup run time can be set;

 Through CAN port, AIN24, AIN26-M02, AIN8, DIN16A and DOUT16B expansion module and BAC150CAN charger can be connected;

By setting oil tank volume and oil consumption curve, residue fuel, residue run time and real-time oil consumption can be displayed;

Monitoring data communication protocol address is customizable by users;

PLC function is fitted;

By connecting SGE02-4G module, wireless network can connect with cloud server;

 By connecting SGE02-4G module, SMS function can be realized; when alarms occur, it can automatically send alarm information to the pre-set 5 phone numbers; messages are also able to control genset and check genset status;

- By connecting SGE02-4G module, GPS positioning function can be realized to obtain genset location;

Genset data can be uploaded at changing by applying network data communication protocol of JSON format; at the same time network flow are extremely reduced by using compression algorithm; when alarms occur, it can immediately upload data to the server;

IP65 waterproof level is achieved with the help of rubber-ring gasket between shell and control fascia;

 Metal fixing clips employed to fix the controller and make it perform better under high temperature environment; Modular structure design, self-extinguishing ABS plastic shell, pluggable terminal, built-in mounting, compact structure with easy installation;

### 3 SPECIFICATION

SmartGen ideas for power

Parameter	Details		
	Accuracy: 1%		
Fuel Relay Output	16A 24V DC power supply output(relay output)		
Crank Relay Output	16A 24V DC power supply output(relay output)		
Aux. Relay Output 1	8A 24V DC power supply output (relay output)		
Aux. Relay Output 2	8A 24V DC power supply output (relay output)		
Aux. Relay Output 3	8A 24V DC power supply output (relay output)		
Aux. Relay Output 4	16A 250V AC volt-free output		
Aux. Relay Output 5	16A 250V AC volt-free output		
Aux. Relay Output 6	16A 250V AC volt-free output		
Aux. Output 7-10	1A DC30V transistor B- output		
Digital Input 1-10	Low threshold voltage 1.2V; high limit voltage is 60V;		
RS485	Isolated, half-duplex, 9600 baud rate,		
	maximum communication length 1000m		
Internet Access	Self-adapting 10/100Mbit		
CAN Port	Isolated, maximum communication length 250m,		
	Belden 9841 cable or equivalent		
EMC/CE Certification	EN 61326-1: 2013		
Vibration Test	5 - 8 Hz: 17 mm		
	8 - 100 Hz: 4g		
	100-500Hz: 2g		
	IEC 60068-2-6		
Shock Test	50g, 11ms, half-sine, complete shock test from three directions, and		
	18 times shock for each test		
	IEC 60068-2-27		
Bump Test	25g, 16ms, self-sine		
	IEC 60255-21-2		
Production Compliance	According to EN 61010-1 installation category (over voltage category)		
	III, 300V, pollution class 2, altitude 3000m		
Case Dimensions	242 mm x 186 mm x 49 mm		
Panel Cutout	214mm x 160mm		
	HGM9420N:		
	Temperature: (-25~+70)°C Relative Humidity: (20~93)%RH		
Working Conditions	HGM9420LT:		
	Temperature: (-40~+70)°C Relative Humidity: (20~93)%RH		
	Under the temperature of -40°C, after power on for 20s it can display		
LCD Display (HGM9420LT)	normally; after power on for 2min, dynamic display responses		
	normally;		
Storage Conditions	HGM9420N: Temperature:(-30~+80)°C		
	HGM9420LT: Temperature:(-45~+80)°C		
	Front Enclosure: IP65 when rubber-ring gasket is installed between		
Protection Level	the enclosure and the control screen		
	Rear Enclosure: IP20		

Parameter	Details
Insulation Intensity	Apply AC2.2kV voltage between high voltage terminal and low voltage terminal and the leakage current is not more than 3mA within 1min.
Weight	0.91kg

#### 4 OPERATION

#### 4.1 INDICATOR LAMP

Fig.1 HGM9420N\_HGM9420LT Indication

**ANOTE:** Description for parts of indicators:

#### **Table 4 Alarm indicator Description**

Alarm Type	Alarm Indicator	
Warning	Slow flashing (1 time per second)	
Block	Slow flashing (1 time per second)	
Trip	Fast flashing (5 times per second)	
Trip and Stop	Fast flashing (5 times per second)	
Shutdown	Fast flashing (5 times per second)	
No Alarm	Extinguished	

**NOTE 1**: Running indicator: is normally illuminated after crank disconnection and before ETS stop and extinguished for other periods;

**NOTE 2**: Gen normal indicator: is normally illuminated when the generator is normal; flashing when generator state is abnormal; extinguished when there is no generating power.

**NOTE 3**: Mains normal indicator: is always illuminated when mains is normal, flashing when mains is abnormal, extinguished when there is no mains.

**NOTE 4**: Fn function key indicator: is illuminated when Fn function key is pressed, extinguished when group keys are pressed.

**NOTE 5**: When mains is disabled, mains normal indicator is extinguished, meanwhile mains close/open keys won't work.

#### 4.2 PUSHBUTTONS

Icons	Buttons	Description
		Stop the running generator in Auto/Manual mode;
		Reset alarm in stop mode;
Ο	Stop Key	Press for over 3s, panel indicators can be tested (lamp test);
		During stop process, press this button again to stop the
		generator immediately.
	Start Key	Start the static genset in Manual mode.
2m	Manual Key	Press this key and the controller goes in Manual mode.
<b>@</b>	Auto Key	Press this key and controller goes in Auto mode.
	Mute/	Remove the alarm sound;
	Reset Alarm Key	Remove the alarm by pressing for over 3s.
		Combine with other key to make shortcut setting; It can also be
Fn	Fn Key	set to other function key (start key, stop key etc.);
Close Open	Close/Open Key	Close/open Gen or Mains breaker in manual mode.
	Up/Increase Key	1) Screen scroll;
		2) Move up the cursor and increase value in setting menu.
	Down/Decrease	1) Screen scroll;
	Key	2) Move down the cursor and decrease value in setting menu.
	Left Key	1) Page scroll;
		2) Left move the cursor in setting menu.
$\bigcirc$		1) Page scroll;
	Right Key	2) Right move the cursor in setting menu.
$\checkmark$		
		1) Enter setting screen;
(ф/ок)	Set/Confirm Key	2) Enter next menu in setting or confirm the settings.
$\sim$		
45C	Exit Key	1) Return to main menu;
(43)		2) Return to previous menu in setting.
ANOTE: Press and III simultaneously in manual mode and it can force the generator to crank. At this time		

#### **Table 5 Button Function Description**

the controller shall not judge whether the genset start is successful or not according to the starting conditions. It is controlled by the operator. When operator observes that the engine has started, he/she should release the button and the start output will be deactivated. Safety on delay will be initiated.

ANOTE: Regarding ECU genset, in Stop/Auto mode, Press

button and it shall power on the ECU (fuel output

and ECU power output are active.).

**ACAUTION:** Factory default password is "00318", and users can change it in case others change the advanced parameter settings. Please clearly remember the password after changing. If you forget it, please contact SmartGen services and send the PD information in the controller page of "**ABOUT**" to the service personnel.

#### 4.3 LCD DISPLAY

#### 4.3.1 MAIN DISPLAY

Paging is applied for the main screen; b is used for page scroll and b for screen scroll.

Main Screen includes the following contents:

Gen: voltage, frequency, current, active power, reactive power;

Mains: voltage, frequency;

Engine: speed, temperature, engine oil pressure, liquid level, battery voltage;

Part of status displays;

Status page includes the following contents:

SGE02-4G status, genset status, Mains breaker status, and breaker status;

Engine page includes the following contents:

Engine speed, engine temperature, engine oil pressure, fuel level, configurable analog 1, configurable analog 2, configurable analog 3, battery voltage, charger voltage, accumulated running time, accumulated start times, DC voltage;

**CONTE:** If CAN BUS is connected and engine information is from J1939, this page also includes: coolant pressure, coolant level, fuel temperature, fuel pressure, inlet temperature, exhaust temperature, turbo pressure, fuel consumption, total fuel consumption and so on. (Different engines have different parameters.)

**ANOTE:** If AIN24 expansion module, or AIN16-M02 expansion module, or BAC150CAN expansion module is enabled, engine page also displays related monitoring data of expansion module.

**ANOTE:** If oil tank volume and oil consumption setting are enabled, engine page also displays residue fuel, residue running time of fuel, and oil consumption parameters.

**Gen** page includes the following contents:

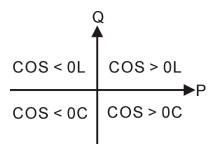

Line voltage, wire voltage, frequency, phase sequence, harmonic content, voltage unbalance percentage.

Load page includes the following contents:

Load current, active power of different phases, total active power and percentage, reactive power of different phases, total reactive power, apparent power of different phases, total apparent power, power factor of different phases, average power factor, accumulated electric power, earth current and percentage, unbalance current and percentage, average load of this run, historical max average load, average load of last run, accumulated electric power of this run.

**ANOTE:** P stands for active power; Q stands for reactive power;

#### **Table 6 Power Factor Display Description**

Power Factor	Conditions	Active Power	Reactive Power	Remark
COS>0L	P>0,Q>0	Input	Input	Load is resistive induction.
COS>0C	P>0,Q<0	Input	Output	Load is resistive capacitance.
COS<0L	P<0,Q>0	Output	Input	Load equals an under excitation generator.
COS<0C	P<0,Q<0	Output	Output	Load equals an over excitation generator.

#### **NOTES**:

- 1. Input active power, and generator send active power to load.
- 2. Output active power, and load supply electricity to generator.
- 3. Input reactive power, and generator send reactive power to load.
- 4. Output reactive power, and load send reactive power to generator.

Mains page includes the following contents:

Phase voltage, wire voltage, frequency, phase sequence.

**Snyc.** page includes the following contents:

**ANOTE**: This displays when Sync. Transfer is enabled.

Voltage difference, frequency difference, phase position difference.

#### Alarm page:

**Otherwise**, please check the generator manual according to SPN alarm code.

#### Event log page:

Make records about all start/stop events (alarm events except warnings, manual start/stop events) and the real time when events occur;

Maintenance Countdown page includes the following contents:

3 maintenance countdowns display.

**ANOTE:** if 3 maintenance countdowns are not enabled, they are not displayed.

**Others** page includes the following:

Module date and time, input and output status, communication indication, RS485 configuration, Ethernet configuration (if enabled), LCD temperature, MCU temperature.

**NOTE**: HGM9420N controller LCD temperature is +++  $^{\circ}$ C.

About page includes the following contents:

Release software version, hardware version, and product PD number.

C

#### 4.3.2 USER MENU AND PARAMETER SETTING

Press () key for more than 1s and it enters user menu.

#### • Parameter Setting

After inputting the correct password (factory default password is 00318) you can enter the parameter setting screen.

• Language

Optional Simplified Chinese, English and others.

• Commissioning

On load, off load and users-defined commissioning are optional. Defined commissioning can be configured regarding load on or load off, commissioning time, and which mode it shall return after commissioning (manual mode, auto mode and stop mode).

• U Flash Configurations Writing and Reading

Configuration files in U flash can be checked; loading configuration files, saving configuration files, saving new configuration files, configuration files can also be saved and loaded on PC; configuration file suffix name is .lgm.

• Clear users' accumulation

It can clear total running time A and B, total electric energy A and B.

Parameter settings include following contents:

- ♦ Module setting
- ♦ Mains setting
- ♦ Timers setting
- ♦ Engine setting
- ♦ Generator setting
- ♦ Load setting
- ♦ Switch setting
- Sensor setting
- Digital input setting
- Digital output setting
- ♦ Scheduled run setting
- ♦ Scheduled not run setting
- ♦ Maintenance setting
- ♦ Alt. Config setting
- ♦ Cycle start enable setting
- ♦ Sync. setting
- ♦ Expansion setting

For example:

Return	Start Delay	Table 1:
Module	Stop Delay	
Mains	Pre-heat Delay	is used to change the contents needed to
Timers	Fuel Delay	(84/DK)
Engine	Cranking Time	set; $(*/\infty)$ is used to enter the setting (Table 2);
Generator	Crank Rest Time	is used to exit from setting;
Load	Safety On Time	

Switch	Start Idle Time	
Sensor	Warming Up Time	
Digital Input	Cooling Time	

Start Delay		Table 2:
Stop Delay	00030s	
Pre-heat Delay		is used to change the contents needed to
Fuel Delay		(2)
Cranking Time		set; $\overset{{}_{\text{\tiny (M)}}}{\longrightarrow}$ is used to confirm the setting (Table 3),
Crank Rest Time		
Safety On Time		returns to previous menu (Table 1);
Start Idle Time		
Warming Up Time		
Cooling Time		

Start Delay		Table 3:
Stop Delay	00030s	(\$\$/0K)
Pre-heat Delay		is used to enter the setting (Table 4), $\checkmark$ is
Fuel Delay		used to return to previous menu (Table 2).
Cranking Time		
Crank Rest Time		
Safety On Time		
Start Idle Time		
Warming Up Time		
Cooling Time		
Start Delay		Table 4:
Stop Delay	00030s	
Pre-heat Delay		is used to change cursor position;
Fuel Delay		is used to shange the value where the surger
Cranking Time		is used to change the value where the cursor
Crank Rest Time		\$/0K)
Safety On Time		is; $\overset{\text{\tiny (N)}}{\longrightarrow}$ is used to confirm the setting (Table 3), $\overset{\text{\tiny (N)}}{\longrightarrow}$
Start Idle Time		is used to exit the setting (Table 3).
Warming Up Time		
Cooling Time		

#### 4.4 AUTO START/STOP OPERATION

#### 4.4.1 ILLUSTRATION

Press button and the indicator beside is illuminated, which means the genset is at Auto Start Mode.

#### 4.4.2 AUTOMATIC START SEQUENCE

a) HGM9420N\_HGM9420LT start conditions:

**Mains enabled**: when mains is abnormal (over voltage, under voltage, over frequency, under frequency, loss of phase, reverse phase sequence), controller enters "Mains Abnormal Delay", LCD mains status line displays countdown. When mains abnormal delay is over, it enters "Start Delay"; or when remote start (on load) input is active, it enters "Start Delay".

Mains disabled or Mains only displayed: when remote start (onload) input is active, it enters "Start Delay".

- b) "Start Delay" countdown will be displayed on genset status line;
- c) When start delay is over, preheating relay is energized (if configured), 'preheat delay XX s' information will be displayed on status line;
- d) After the above delay, the fuel relay is energized, and then the start relay is engaged. During the 'start time', if the genset does not start, then fuel relay and start relay stops outputting, and enter 'crank rest time', waiting for next crank;
- e) Should the start continues beyond the set attempts, the controller issues 'start failure' and stops the genset and at the same time alarm page on LCD displays 'start failure alarm';
- f) If it starts during the attempts, it enters 'safety on time', and during this period Low Oil Pressure, High Temperature, Under speed and Charge Alternator Failure alarms are all inactive; After 'safety on time', it enters 'start idle delay' (if configured);
- g) During 'start idle delay', under speed, under frequency, under voltage alarms are inhibited. When this delay is over, 'warming up delay' is initiated (if configured);
- h) When synchronous transfer is disabled, mains abnormal start or remote start (onload) input is active, and when warming up delay is over, if gen is normal, gen status indicator is illuminated; if gens voltage, frequency meet the onload requirements, gen close relay outputs and genset takes the load. Gen supply indicator is illuminated, and genset enters normal running status; if genset voltage or frequency is not normal, controller issues alarm and shutdowns (LCD alarm page displays gen alarm type);
- i) When synchronous transfer is enabled, mains is normal and remote start (onload) input is active, when warming up delay is over, if gen is normal, then gen status indicator is illuminated. Controller issues close signal after waiting for genset and mains meeting the sync. requirement; after controller detects gen close feedback, it immediately issues mains open signal, and genset takes the load.
- j) When synchronous transfer is enabled, mains abnormal start, and warming up delay is over, if gen is normal, gen status indicator is illuminated; if genset voltage, frequency is up to the load requirement, then gen close relay outputs, and genset takes the load. Gen supply indicator is illuminated and genset enters normal running status.

**ANOTE**: When Remote Start is applied to start (Off Load), the procedure is the same as above. Only when it is in

procedure h) or i), generator close relay is deactivated, and moreover, genset is off load.

#### 4.4.3 AUTOMATIC STOP SEQUENCE

a) In the process of genset normal running, if Mains recovers, genset enters "Mains Voltage Normal Delay". When Mains normal is confirmed, Mains status indicator is illuminated and "Stop Delay" is initiated. Or when remote start input is inactive, "Stop Delay" is initiated;

- b) After stop delay is over:
  - Synchronous Transfer Disabled: Cooling Time is initiated, and at the same time gen close relay is disconnected; after "switch transfer delay", Mains close relay outputs and Mains takes the load; Gen supply indicator is extinguished and Mains supply indicator is illuminated;
  - 2) Synchronous Transfer Enabled: Controller issues Mains close signal after waiting for genset and Mains meeting sync. requirement; when Mains close feedback signal is detected, it immediately issues Gen open signal; Gen supply indicator is extinguished, and Mains takes the load; Mains supply indicator is illuminated and Cooling Time is initiated;
- c) At entering "stop idle delay" (if configured), the idling speed relay is energized;

d) "ETS solenoid hold" begins, ETS relay is energized while fuel relay is de-energized, and complete stop is detected automatically;

e) "Fail to stop delay" begins, and complete stop is detected automatically;

f) When generator is stopped completely, "after stop delay" will be initiated. Otherwise, controller enters "fail to stop" period, and issues failed to stop alarm (If generator stops successfully after 'fail to stop' alarm has initiated, "after stop delay" will be initiated and the alarm will automatically be removed.);
g) Generator is placed into its standby mode after its 'after stop delay';

#### 4.5 MANUAL START/STOP OPERATION

a) HGM9420N\_HGM9420LT: Manual mode is selected by pressing the 2 button; a LED besides

the button will be illuminated to confirm the operation; then press **button** to start the gen-set; it can

detect crank disconnect condition and generator accelerates to high-speed running automatically. With high temperature, low oil pressure, over speed and abnormal voltage during generator running, controller can protect genset to stop quickly (please refer to c-i of **4.3.2 Automatic Start Sequence** for detailed procedures).

- b) MANUAL STOP: Press on and it can shut down the running generators. (Please refer to b-g of
- **4.3.3 Automatic Start Sequence** for detailed procedures).

### 5 CONTROLLER SWITCH CONTROL PROCEDURES

#### 5.1 SWITCH CONTROL PROCEDURE FOR SYNC TRANSFER DISABLED

#### 5.1.1 MANUAL TRANSFER PROCESS

When controller is in **Manual** mode, the switch control procedures will start through manual transfer procedures. Users can control the loading transfer of ATS via pressing switch close/open keys.

**Mains Enabled:** If open detection is disabled, press gen close/open key <sup>Open</sup>; if gen takes the load, then switch open outputs; if load is disconnected, then gen closes; if Mains takes the load, then mains

opens; when open delay is over, gen closes. Press mains close/open key Open, if mains takes the load, then switch open outputs; if load is disconnected, then Mains closes; if Gen takes the load, then gen opens; when open delay is over, Mains closes.

If open detection is enabled and Mains taking load transfers to Gen taking load, first press Mains open

key Open, after open delay press Gen close key, and Gen closes (directly press Gen close key, no action). If Gen loading transfers to Mains loading, the same procedure as above;

Mains Disabled: Press Gen close/open key , if Gen isn't taking the load, then Gen close outputs.

Press Gen close/open key Open, if Gen takes the load, then Gen open outputs.

#### 5.1.2 AUTOMATICTRANSFER PROCEDURE

When controller is in Auto or Stop mode, the switch control procedure is automatic control procedure.

a) If input configuration is close status auxiliary input,

#### Mains Enabled:

Close

- If open detection is enabled and Mains loading transfers to Gen loading, after open delay and transfer interval delay, failed to transfer starts to detect at the same time of open output. Detection time is due. if it fails to open, then Gen won't close; otherwise Gen closes. At the same time of Gen close, failed to transfer starts to detect; detection time is due; if it fails to close, then wait for gen close. If failed to transfer warning is enabled, close/open failure will issue warning signal. About Gen loading transfering to Mains loading, the same is as above.
- If open detection is disabled and Mains loading transfers to Gen loading, after open delay and transfer interval delay, Gen closes. At the same time of gen close, failed to transfer starts to detect. detection time is due; if it fails to close, then wait for gen close; if failed to transfer warning is enabled, warning signal will be issued. About Gen loading transfering to Mains loading, the same is as above.

#### **Mains Disabled**

• When breaker open detection is enabled, gen on-load changes to generator off-load. After open delay in the process of open output, transfer failure is detected. When the detection time is due, if open fails, then open is waited for, otherwise open is completed. For generator off-load changing to

generator on-load, after close delay, in the process of close output, transfer failure is detected. When the detection time is due, if close fails, then close is waited for, otherwise close is completed.

- If transfer failure warning is enabled, then open/close failures shall issue warning signals.
- When breaker open detection is disabled, generator on-load changes to generator off-load. After open delay, open is completed. For generator off-load changing to generator on-load, after close delay, in the process of close output, transfer failure is detected. When the detection time is due, if close fails, then close is waited for, otherwise close is completed. If transfer failure warning is enabled, then close failure shall issue warning signal.
- b) In case input port is not configured as close status auxiliary input,

#### Mains Enabled:

For mains on-load changing to generator on-load, after open delay and transfer rest delay, generator close occurs. For generator on-load changing to mains on-load, it is the same as above.

#### Mains Disabled:

For generator off-load changing to generator on-load, generator close outputs. For generator on-load changing to generator off-load, generator open outputs.

NOTE 1: In case of applying ATS without neutral breaking, open detection shall be disabled.

NOTE 2: In case of applying ATS with neutral breaking, open detection can be enabled and disabled. If it is enabled, please configure open output.

**NOTE 3**: In case of applying AC contactor, open detection is recommended to be enabled.

#### 5.2 SWITCH CONTROL PROCEDURE FOR SYNCHRONOUS TRANSFER ENABLED

#### 5.2.1 MANUAL TRANSFER PROCEDURE

Breaker is switched by manual control if controller is in manual mode.

Operator controls ATS load transfer via C/O button.

#### Mains Enabled:

Press Gen close/open key

- 1. In case of generator on-load, then generator open outputs;
- 2. In case of generator&mains off-load, then generator close occurs;
- 3. In case of mains on-load, when generator synchronization close is over, mains open occurs and generator is on-load.

NOTE: In the process of waiting for synchronization or if synchronization fails, press mains C/O key open to cancel synchronization, and mains breaker is open. Then press gen C/O button to force gen on-load.

Press Mains Close/Open key Open:

- 1. In case of gen on-load, then mains open outputs;
- 2. In case of mains/gen both off-load, then mains close occurs;

3. In case of gen on-load, then mains synchronization close is over, gen open occurs and mains is on-load.

**NOTE**: In the process of waiting for synchronization or if synchronization fails, press generator C/O button or if synchronization, and generator breaker is open. Then press mains C/O button to force mains on-load.

#### Mains Disabled:

Press Gen C/O key , and if generator is off-load, then generator close outputs; if generator is on-load, then generator open outputs.

#### 5.2.2 AUTO SWITCHING PROCESS

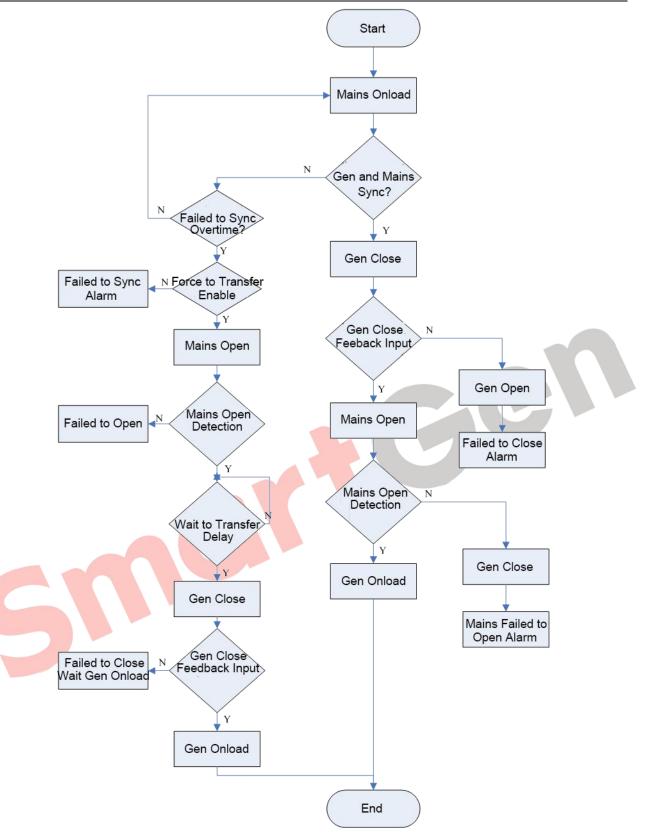

Breaker is switched by automatic control if controller in auto or stop mode.

#### Mains Enabled:

1. For mains on-load changing to generator on-load,

Controller shall output generator close when genset and mains meet synchronization conditions. When it detects generator close feedback signal, mains open outputs and generator is on-load. If generator close is outputted, generator close feedback signal is not detected during the C/O synchronization period, generator open is outputted and mains is on-load. Mains open status is detected at the time of mains open output. When the C/O synchronization time is due, if mains open fails, generator open outputs. If synchronization signal is not detected during the set synchronization failure time, then synchronization failure alarm is issued. If synchronization failure alarm is warning and transfer is forced to be enabled after synchronization failure ten mains open outputs. After open delay, mains open status is detected at the time of mains open output. When detection time is due, if mains open fails, then generator shall not close, otherwise, after transfer delay generator close outputs. Generator close status is detected at the time of generator close output. When the detection time is due, if generator close fails generator close fails generator close is waited for. Transfer procedure is as below:

#### Fig. 2 Mains Onload Transfering to Gen Onload

2. For gen on-load changing to mains on-load,

Controller shall output mains close when genset and mains meet synchronization conditions. When it detects mains close feedback signal, generator open outputs and mains is on-load. If mains close is outputted, mains close feedback signal is not detected during the C/O synchronization period, mains

open is outputted and generator is on-load. Generator open status is detected at the time of generator open output. When the C/O synchronization time is due, if generator open fails, mains open outputs. If synchronization signal is not detected during the set synchronization failure time, then synchronization failure alarm is issued. If synchronization failure alarm is warning and transfer is forced to be enabled after synchronization failure, then generator open outputs. After open delay, generator open status is detected at the time of generator open output. When detection time is due, if generator open fails, then mains shall not close, otherwise, after transfer delay mains close outputs. Mains close status is detected at the time of mains close output. When the detection time is due, if mains close fails mains close is waited for. Transfer procedure is as below:

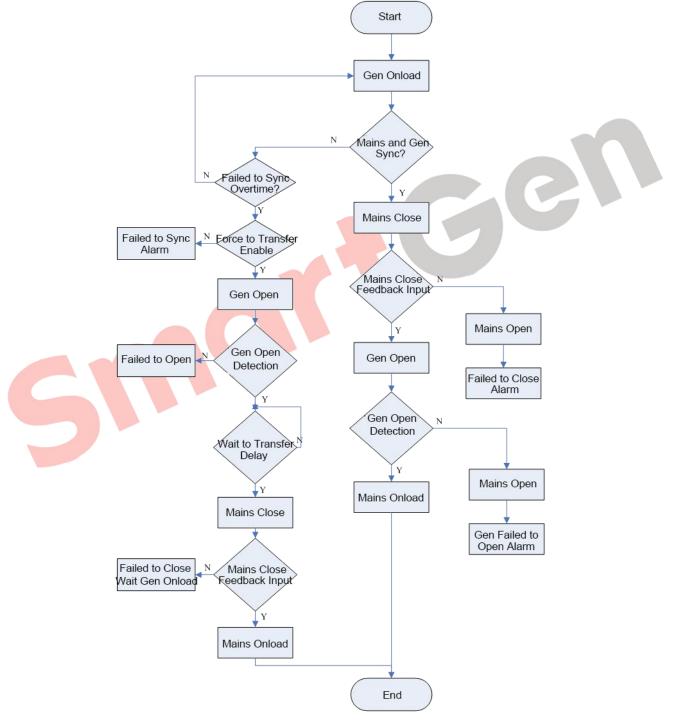

Fig. 3 Gen Onload Transfering to Mains Onload

#### Mains Disabled:

For generator off-load changing to generator on-load, generator close outputs. For generator on-load changing to generator off-load, generator open outputs.

**NOTE 1**: Mains close status and Generator close status are needed to be configured for input port, otherwise controller shall issue mains breaker failure warning or generator breaker failure warning.

**NOTE 2**: For synchronization failure alarm, it is needed to press Use Ionger to remove the alarm.

**NOTE 3**: If synchronization C/O detection time is less than breaker C/O time, then synchronization C/O detection time is breaker C/O time.

#### 6 **PROTECTIONS**

#### 6.1 WARNING ALARMS

When controller detects the warning alarm, it only issues warning, and the genset does not open and shutdown. When the warning signal disappears, alarm reset automatically.

No	Туре	Description
		When this is enabled, and the controller detects that the engine speed is
1	Over Speed	above the pre-set limit, it will initiate a warning.
		It is always detected.
		When this is enabled and the controller detects that the engine speed is
2	Under Speed	below the pre-set limit, it will initiate a warning.
		It is detected after 'warming up' and before 'stop idle'.
		When the controller detects the engine speed is 0, it shall issue a
3	Loss of Speed Signal	warning.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
		When this is enabled, and the controller detects the frequency is above
4	Gen <mark>Ove</mark> r Frequency	the preset limit, it shall issue a warning.
		It is detected always.
		When this is enabled, and the controller detects the frequency is below
5	Gen Under Frequency	the preset limit, it shall issue a warning.
		It is detected after 'warming up time' before 'stop idle time'.
		When this is enabled, and the controller detects the voltage is above the
6	Gen Over Voltage	preset limit, it shall issue a warning.
		It is always detected.
		When this is enabled, and the controller detects the voltage is below the
7	Gen Under Voltage	preset limit, it shall issue a warning.
		It is detected after 'warming up time' before 'stop idle time'.
		When this is enabled, and the controller detects the current is above the
8	Gen Over Current	preset limit, it shall issue a warning.
		It is always detected.
9	Negative Sequence	When this is enabled, and the controller detects the value is above the

#### Table 7 Warning Alarms

No	Туре	Description
	Current	preset limit, it shall issue a warning.
		It is always detected.
		When this is enabled, and the controller detects the earth current is
10	Earth Fault	above the preset limit, it shall issue a warning.
		It is always detected.
-		When this is enabled, and the controller detects the reverse power
11	Reverse Power	(negative) is above the preset limit, it shall issue a warning.
		It is always detected.
		When this is enabled, and the controller detects the genset power
12	Over Power	(positive) is above the preset limit, it shall issue a warning.
		It is always detected.
		When this is enabled, and the controller detects the genset reactive
13	Loss Excitation	power (negative) is above the preset limit, it shall issue a warning.
		It is always detected.
		When the controller receives the engine alarm signal from J1939, it shall
14	ECU Alarm	issue a warning.
		It is always detected.
		When the controller detects the sensor circuit is open, it shall issue a
15	Temp. Sensor Open	warning.
		It is always detected.
		When this is enabled, and the controller detects the temp. is above the
16	Engine Temp High	preset limit, it shall issue a warning.
	ge . epg	It is detected after 'safety on time' before 'ETS solenoid hold'.
		When this is enabled, and the controller detects the temp. is below the
17	Engine Temp Low	preset limit, it shall issue a warning.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
		When the controller detects the sensor circuit is open, it shall issue a
18	Oil Pressure Sensor	warning.
	Open	It is always detected.
		When this is enabled, and the controller detects the pressure is below
19	Oil Pressure Low	the preset limit, it shall issue a warning.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
		When voltage or current input is selected for the curve type of the
		controller, and the controller detects input signal is abnormal, it shall
20	Oil Pressure Sensor	issue a warning, and meanwhile the curve is transferred to resistor type
	Wrong	to prevent damaging the controller.
		It is detected always.
		When the controller detects the sensor circuit is open, it shall issue a
21	Fuel Level Sensor	warning.
	Open	It is always detected.
		When this is enabled, and the controller detects the level is below the
22	Fuel Level Low	preset limit, it shall issue a warning.
		It is always detected.
<u> </u>	<u> </u>	

No	Туре	Description
		When controller curve type selects voltage or current input, and when
	Fuel Level Sensor	controller detects input signal abnormal, it will issue a warning signal;
23	Wrong	meanwhile curve type will transfer to resistance to prevent damaging the
	winng	controller.
		It is always detected.
24	Eloy Sonsor 1 Opon	When controller detects sensor is open, it will issue a warning signal;
24	Flex. Sensor 1 Open	It is always detected.
		When over high warning is enabled, and the controller detects the
		sensor value is above the preset upper limit, it shall issue a warning.
25	Flex. Sensor 1 High	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low warning is enabled, and the controller detects the sensor
		value is below the preset low limit, it shall issue a warning.
26	Flex. Sensor 1 Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When voltage or current input is selected for the curve type of the
		controller, and the controller detects input signal is abnormal, it shall
27	Flex. Sensor 1 Wrong	issue a warning, and meanwhile the curve is transferred to resistor type
	-	to prevent damaging the controller.
		It is detected always.
		When the controller detects the sensor circuit is open, it shall issue a
28	Flex. Sensor 2 Open	warning.
		It is always detected.
		When over high warning is enabled, and the controller detects the
		sensor value is above the preset upper limit, it shall issue a warning.
29	Flex. Sensor 2 High	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low warning is enabled, and the controller detects the sensor
		value is below the preset low limit, it shall issue a warning.
30	Flex. Sensor 2 Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When voltage or current input is selected for the curve type of the
		controller, and the controller detects input signal is abnormal, it shall
31	Flex. Sensor 2 Wrong	issue a warning, and meanwhile the curve is transferred to resistor type
	5	to prevent damaging the controller.
		It is detected always.
		When the controller detects the sensor circuit is open, it shall issue a
32	Flex. Sensor 3 Open	warning.
		It is always detected.

No	Туре	Description
		When over high warning is enabled, and the controller detects the
		sensor value is above the preset upper limit, it shall issue a warning.
33	Flex. Sensor 3 High	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low warning is enabled, and the controller detects the sensor
		value is below the preset low limit, it shall issue a warning.
34	Flex. Sensor 3 Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		After 'fail to stop delay' is over, if the genset does not stop completely, it
35	Fail to Stop	will initiate a warning alarm.
		When this is enabled and the controller detects that charger voltage is
36	Charge Alternator	below the pre-set limit, it will initiate a warning alarm.
00	Failure	It is detected when the genset is normally running.
		When this is enabled, and the controller detects the battery voltage is
37	Battery Over Volt	above the preset limit, it shall issue a warning signal.
57	Dattery Over volt	It is always detected.
		When this is enabled, and the controller detects the battery voltage is
38	Battery Under Volt	below the preset limit, it shall issue a warning signal.
30	Dattery Onder Volt	It is always detected.
		If the controller doesn't detect sync. signal within the pre-set time, it will
39	Fail to Sync.	
39		initiate a warning alarm. It is detected when GCB closes.
10	Gen Breaker Alarm	When Sync. transfer is enabled, and when gen close status input is not
40	Gen Breaker Alarm	set for controller input port, the controller will initiate a warning alarm.
		It is always detected.
		When Sync. transfer is enabled, and when mains close status input is
41	Mains Breaker Alarm	not set for controller input port, the controller will initiate a warning
		alarm.
		It is always detected.
	•••··	Maintenance 1 enabled, when maintenance 1 countdown is equal to
42	Maintenance Time 1	maintenance 1 countdown A or maintenance 1 countdown B, or
	Due	maintenance 1 countdown is 0, controller will issue a warning signal.
		It is detected when genset is running.
		Maintenance 2 enabled, when maintenance 2 countdown is equal to
43	Maintenance Time 2	maintenance 2 countdown A or maintenance 2 countdown B, or
	Due	maintenance 2 countdown is 0, controller will issue a warning signal;
		It is detected when genset is running.
		Maintenance 3 enabled, when maintenance 3 countdown is equal to
44	Maintenance Time 3	maintenance 3 countdown A or maintenance 3 countdown B, or
	Due	maintenance 3 countdown is 0, controller will issue a warning signal;
		It is detected when genset is running.

No	Туре	Description
		When controller detects gen reverse phase sequence, controller issues a warning signal.
45	Gen Reverse Phase	Gen reverse phase sequence detection enabled, it is detected when
		3Ph 4W or 2Ph 3W phase voltage is over 30V, 3Ph 3W line voltage is
		over 50V.
		When controller detects gen loss of phase, controller issues a warning
40	Carl and of Dhana	signal;
46	Gen Loss of Phase	Gen loss of phase enabled, it is detected when 3Ph 4W or 2Ph 3W
		phase voltage is above 30V, or 3Ph 3W line voltage is above 50V.
47	Switch Fail	When controller detects switch close/open failure and switch failure
77		warning is enabled, controller issues a warning signal.
		When digital input port is selected to user defined and it is active,
48	Digital Input Alarm	controller issues related input alarm signal;
		It is detected in the detection range of input port settings.
		When PLC function selects user defined and it is active, controller
49	PLC Function Alarm	issues related PLC function alarm signal.
		It is detected in the detection range of PLC function settings.
		When DIN16 communication is enabled and the controller cannot
50	DIN16 Com. Fail	receive the communication data, it will initiate a warning.
		It is always detected.
		When DIN16 input is set users-defined and if it is active, the controller
51	DIN16 Input Alarm	will initiate a warning.
		It is detected in the detection range set in the input.
		When DOUT16 communication is enabled and the controller cannot
52	DOUT16 Com. Fail	receive the communication data, it will initiate a warning.
		It is always detected.
50	AIN24 Com. Fail	When AIN24 communication is enabled and the controller cannot
53		receive the communication data of AIN24, it will initiate a warning.
		It is always detected.
-		When this is enabled and the controller detects cylinder temperature
54	AIN24 Cylinder Temp.	has exceeded the pre-set value, it will initiate a warning alarm.
	High	It is detected after 'safety on time' before 'ETS solenoid hold'.
		When this is enabled and the controller detects exhaust temperature
55	AIN24 Exhaust Temp.	has exceeded the pre-set value, it will initiate a warning alarm.
	High	It is detected after 'safety on time' before 'ETS solenoid hold'.
56	AINI24 Cylindar Toma	When this is enabled and the controller detects cylinder temp. difference
50	AIN24 Cylinder Temp.	has exceeded the pre-set value, it will initiate a warning alarm.
	Difference High	It is detected after 'safety on time' before 'ETS solenoid hold'.
57	AINI24 Sansar Onan	When the controller detects the sensor circuit is open, it shall issue a warping
51	AIN24 Sensor Open	warning. It is always detected.
		When over high warning is enabled, and the controller detects the
58	AIN24 Sensor High	sensor value is above the preset upper limit, it shall issue a warning.
		שוושי אמועב וש מטטעב גווב אופשבו עארבו וווווג, וג שומו וששער מ waitility.

SmartGen ideas for power

No	Туре	Description
		It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low warning is enabled, and the controller detects the sensor
		value is below the preset lower limit, it shall issue a warning.
59	AIN24 Sensor Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When this is enabled and the controller detects that the generator power
60	Power Factor Low	factor has fallen below the pre-set value, it will initiate a warning alarm.
		It is always detected.
		When this is enabled and the controller detects that the THD has
61	THD High	exceeded the pre-set value, it will initiate a warning alarm.
	The high	It is always detected.
		When this is enabled and the controller detects that the voltage
		unbalanced value has exceeded the pre-set value, it will initiate a
62	Gen Volt Unbalance	warning alarm.
		It is always detected.
		Cycle Start Enable is enabled, when controller cannot receive the
63	Cycle Com Fail	communication data of another controller, controller issues alarm signal.
03		It is detected when controller is in auto mode.
		When SGE02 (4G wireless communication expansion card) is enabled,
64	SGE02-4G Com Fail	
04	SGE02-4G Com Fail	and GSM module is not detected, controller issues a warning signal; It is detected always.
		When AIN16-M02 is enabled, and when controller cannot receive the
65	AIN16-M02 Com Fail	communication data of AIN16-M02 module, controller issues a warning
		signal;
		It is detected always.
00	AIN16-M02 Sensor	When controller detects sensor is open, controller issues an alarm
66	Open	signal;
		It is detected always.
		When over high warning is enabled, and the controller detects the
07	AIN16-M02 Sensor	sensor value is above the preset upper limit, it shall issue a warning.
67	High	It is detected after 'safety on time' before 'ETS solenoid hold' when the
	-	sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low warning is enabled, and the controller detects the sensor
	AIN16-M02 Sensor Low	value is below the preset lower limit, it shall issue a warning.
68		It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
69	AIN8 Com Fail	AIN8 enabled; when controller cannot receive AIN8 module
_		communication data, it will issue alarm signal;

No	Туре	Description
		It is detected always.
70		When controller detects sensor open, it issues alarm signal;
70	AIN8 Sensor Open	It is detected always.
		Enabled; when the sensor value detected by the controller is over the
		pre-set upper limit, controller issues alarm signal;
71	AIN8 Sensor High	When sensor type selects temp sensor and pressure sensor, it is
		detected after safety on run before ETS stop;
		It is detected always when sensor type selects liquid level sensor.
		Enabled; when the sensor value detected by the controller is below the
	AIN8 Sensor Low	pre-set lower limit, controller issues alarm signal;
72		When sensor type selects temp sensor and pressure sensor, it is
		detected after safety on run before ETS stop;
		It is detected always when sensor type selects liquid level sensor.
		When BAC150CAN is enabled, and when controller cannot receive
73	BAC150CAN Com Fail	communication data of BAC150CAN module, controller issues a
13		warning signal;
		It is always detected.

#### 6.2 BLOCK ALARMS

When the controller detects block signals, it only issues warning and the genset does not shutdown and not open. Users need to reset alarms manually.

### Table 8 Block Alarms

No	Туре	Description
1		When this is enabled, and the controller detects that the genset speed is
	Over Speed	above the pre-set limit, it will initiate a block alarm.
		It is always detected.
2		When this is enabled and the controller detects that the genset speed is
	Under Speed	below the pre-set limit, it will initiate a block alarm.
		It is detected after 'warming up' and before 'stop idle'.
	Loss of Speed Signal	When the controller detects the genset speed is 0, it shall issue a block
3		alarm.
		It is detected after 'safety on time' and before 'ETS solenoid hold'.
		When this is enabled, and the controller detects the genset frequency is
4	Gen Over Frequency	above preset limit, it shall issue a block alarm.
		It is detected always.
		When this is enabled, and the controller detects the frequency is below
5	Gen Under Frequency	the preset limit, it shal <mark>l issue</mark> a block alarm.
		It is detected after 'warming up' and before 'stop idle'.
	Gen Over Voltage	When this is enabled, and the controller detects the genset voltage is
6		above preset limit, it shall issue a block alarm.
		It is detected always.
		When this is enabled, and the controller detects the voltage is below the
7	Gen Under Voltage	preset limit, it shall issue a block alarm.
		It is detected after 'warming up' and before 'stop idle'.
	Gen Over Current	When this is enabled, and the controller detects the genset current is
8		above preset limit, it shall issue a block alarm.
		It is detected always.
	Negative Sequence Current	When this is enabled, and the controller detects the unbalanced current
9		is above preset limit, it shall issue a block alarm.
		It is detected always.
	Earth Fault	When this is enabled, and the controller detects the earth current is
10		above the preset limit, it shall issue a block alarm.
		It is always detected.
	Reverse Power	When this is enabled, and the controller detects the reverse power
11		(negative) is above the preset limit, it shall issue a block alarm.
		It is always detected.
12	Over Power	When this is enabled, and the controller detects the genset power
		(positive) is above the preset limit, it shall issue a block alarm.
		It is always detected.
13	Loss Excitation	When this is enabled, and the controller detects the genset reactive

No	Туре	Description
		power (negative) is above the preset limit, it shall issue a block alarm.
		It is always detected.
14		When the controller receives the engine alarm signal from J1939, it shall
	ECU Alarm	issue a block alarm.
		It is always detected.
	Temp. Sensor Open	When the controller detects the sensor circuit is open, it shall issue a
15		block alarm.
		It is always detected.
	Engine Temp High	When this is enabled, and the controller detects the temp. is above the
16		preset limit, it shall issue a block alarm.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
		When this is enabled, and the controller detects the temp. is below the
17	Engine Temp Low	preset limit, it shall issue a block alarm.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
	Oil Pressure Sensor	When the controller detects the sensor circuit is open, it shall issue a
18		block alarm.
	Open	It is always detected.
	Oil Pressure Low	When this is enabled, and the controller detects the pressure is below
19		the preset limit, it sha <mark>ll is</mark> sue a block alarm.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
	Oil Pressure Sensor Wrong	When voltage or current input is selected for the curve type of the
		controller, and the controller detects input signal is abnormal, it shall
20		issue a block alarm, and meanwhile the curve is transferred to resistor
		type to prevent damaging the controller.
		It is detected always.
	Fuel Lovel Sensor	When the controller detects the sensor circuit is open, it shall issue a
21	Fuel Level Sensor Open	block alarm.
		It is always detected.
		When this is enabled, and the controller detects the level is below the
22	Fuel Level Low	preset limit, it shall issue a block alarm.
		It is always detected.
		When voltage or current input is selected for the curve type of the
	Fuel Level Sensor Wrong	controller, and the controller detects input signal is abnormal, it shall
23		issue a block alarm, and meanwhile the curve is transferred to resistor
		type to prevent damaging the controller.
		It is detected always.
	Flex. Sensor 1 Open	When the controller detects the sensor circuit is open, it shall issue a
24		block alarm.
		It is always detected.
	Flex. Sensor 1 High	When over high block alarm is enabled, and the controller detects the
25		sensor value is above the preset upper limit, it shall issue a block alarm.
20		It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		sensor is selected as temperature sensor and pressure sensor;

No	Туре	Description
		It is always detected when the sensor is selected as fuel level sensor.
		When over low block alarm is enabled, and the controller detects the
		sensor value is below the preset low limit, it shall issue a block alarm.
26	Flex. Sensor 1 Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
27		When voltage or current input is selected for the curve type of the
		controller, and the controller detects input signal is abnormal, it shall
	Flex. Sensor 1 Wrong	issue a block alarm, and meanwhile the curve is transferred to resistor
		type to prevent damaging the controller.
		It is detected always.
		When the controller detects the sensor circuit is open, it shall issue a
28	Flex. Sensor 2 Open	block alarm.
		It is always detected.
		When over high block alarm is enabled, and the controller detects the
		sensor value is above the preset upper limit, it shall issue a block alarm.
29	Flex. Sensor 2 High	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low block alarm is enabled, and the controller detects the
		sensor value is below the preset low limit, it shall issue a block alarm.
30	Flex. Sensor 2 Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When voltage or current input is selected for the curve type of the
		controller, and the controller detects input signal is abnormal, it shall
31	Flex. Sensor 2 Wrong	issue a block alarm, and meanwhile the curve is transferred to resistor
		type to prevent damaging the controller.
		It is detected always.
		When the controller detects the sensor circuit is open, it shall issue a
32	Flex. Sensor 3 Open	block alarm.
		It is always detected.
		When over high block alarm is enabled, and the controller detects the
		sensor value is above the preset upper limit, it shall issue a block alarm.
33	Flex. Sensor 3 High	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low block alarm is enabled, and the controller detects the
		sensor value is below the preset low limit, it shall issue a block alarm.
34	Flex. Sensor 3 Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
35	Failed to Stop	After 'fail to stop delay' is over, if the genset does not stop completely, it
	•

SmartGen ideas for power

No	Туре	Description
49	AIN24 Exhaust Temp. High	When this is enabled and the controller detects exhaust temperature
		has exceeded the pre-set value, it will initiate a block alarm.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
		When this is enabled and the controller detects cylinder temp. difference
50	AIN24 Cylinder Temp.	has exceeded the pre-set value, it will initiate a block alarm.
	Difference High	It is detected after 'safety on time' before 'ETS solenoid hold'.
51	AIN24 Sensor Open	When the controller detects the sensor circuit is open, it shall issue a
		block alarm.
		It is always detected.
	AIN24 Sensor High	When over high alarm is enabled, and the controller detects the sensor
		value is above the preset upper limit, it shall issue a block alarm.
52		It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low alarm is enabled, and the controller detects the sensor
		value is below the preset lower limit, it shall issue a block alarm.
53	AIN24 Sensor Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When this is enabled and the controller detects that the generator power
54	Power Factor Low	factor has fallen below the pre-set limit, it will initiate a block alarm.
		It is always detected.
	THD High	When this is enabled and the controller detects that the THD has
55		exceeded the pre-set limit, it will initiate a block alarm.
		It is always detected.
		When this is enabled and the controller detects that the voltage
	Gen Volt Unbalance	unbalanced value has exceeded the pre-set limit, it will initiate a block
56		alarm.
		It is always detected.
		When AIN16-M02 is enabled, and when controller cannot receive the
	AIN16-M02 Com. Fail	communication data of AIN16-M02 module, controller issues a block
57		signal;
		It is detected always.
	AIN16-M02 Sensor Open	When controller detects sensor is open, controller issues an alarm
58		signal;
00		It is detected always.
		When over high alarm is enabled, and the controller detects the sensor
59	AIN16-M02 Sensor High	value is above the preset upper limit, it shall issue an alarm.
		It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
	AIN16-M02 Sensor	When over low alarm is enabled, and the controller detects the sensor
60		
	Low	value is below the preset lower limit, it shall issue an alarm.

No	Туре	Description	
		It is detected after 'safety on time' before 'ETS solenoid hold' when the	
		sensor is selected as temperature sensor and pressure sensor;	
		It is always detected when the sensor is selected as fuel level sensor.	
		AIN8 enabled; when controller cannot receive AIN8 module	
61	AIN8 Com Fail	communication data, it will issue alarm signal;	
		It is detected always.	
62	AIN8 Sensor Open	When controller detects sensor open, it issues alarm signal;	
02	Aino Sensor Open	It is detected always.	
		Enabled; when the sensor value detected by the controller is over the	
		pre-set upper limit, controller issues alarm signal;	
63	AIN8 Sensor High	When sensor type selects temp sensor and pressure sensor, it is	
		detected after safety on run before ETS stop;	
		It is detected always when sensor type selects liquid level sensor.	
	AIN8 Sensor Low	Enabled; when the sensor value detected by the controller is below the	
		pre-set lower limit, controller issues alarm signal;	
64		When sensor type selects temp sensor and pressure sensor, it is	
		detected after safety on run before ETS stop;	
		It is detected always when sensor type selects liquid level sensor.	
	BAC150CAN Com. Fail	When BAC150CAN is enabled, and when controller cannot receive	
65		communication data of BAC150CAN module, controller issues an alarm	
05		signal;	
		It is always detected.	

#### 6.3 TRIP ALARM

When controller detects safety trip signals, it will open breaker immediately but not stop the genset. Users need to reset alarms manually.

Nia	Tures	Description
No	Туре	Description
1	Over Creed	When this is enabled, and the controller detects that the genset speed is
	Over Speed	above the pre-set limit, it will initiate an alarm signal.
		It is always detected.
-		When this is enabled and the controller detects that the genset speed is
2	Under Speed	below the pre-set limit, it will initiate an alarm signal.
		It is detected after 'warming up' and before 'stop idle'.
		When the controller detects the genset speed is 0, it shall issue an alarm
3	Loss of Speed Signal	signal.
		It is detected after 'safety on time' and before 'ETS solenoid hold'.
		When this is enabled, and the controller detects the genset frequency is
4	Gen Over Frequency	above preset limit, it shall issue an alarm signal.
		It is detected always.
		When this is enabled, and the controller detects the frequency is below
5	Gen Under Frequency	the preset limit, it shal <mark>l issue</mark> an alarm signal.
		It is detected after 'warming up' and before 'stop idle'.
		When this is enabled, and the controller detects the genset voltage is
6	Gen Over Voltage	above preset limit, it shall issue an alarm signal.
		It is detected always.
		When this is enabled, and the controller detects the voltage is below the
7	Gen Under Voltage	preset limit, it shall issue an alarm signal.
		It is detected after 'warming up' and before 'stop idle'.
		When this is enabled, and the controller detects the genset current is
8 🖕	Gen Over Current	above preset limit, it shall issue an alarm signal.
		It is detected always.
		When this is enabled, and the controller detects the unbalanced current
9	Negative Sequence	is above preset limit, it shall issue an alarm signal.
	Current	It is detected always.
	Earth Fault	When this is enabled, and the controller detects the earth current is
10		above the preset limit, it shall issue an alarm signal.
		It is always detected.
		When this is enabled, and the controller detects the reverse power
11	Reverse Power	(negative) is above the preset limit, it shall issue an alarm signal.
		It is always detected.
		When this is enabled, and the controller detects the genset power
12	Over Power	(positive) is above the preset limit, it shall issue an alarm signal.
		It is always detected.
12	Loca Evoitation	
13	Loss Excitation	When this is enabled, and the controller detects the genset reactive

		-
		sensor is selected as temperature sensor and pressure sensor;

No	Туре	Description
		It is always detected when the sensor is selected as fuel level sensor.
26	Flex. Sensor 1 Low	When over low alarm is enabled, and the controller detects the sensor value is below the preset low limit, it shall issue an alarm signal. It is detected after 'safety on time' before 'ETS solenoid hold' when the sensor is selected as temperature sensor and pressure sensor; It is always detected when the sensor is selected as fuel level sensor.
27	Flex. Sensor 1 Wrong	When voltage or current input is selected for the curve type of the controller, and the controller detects input signal is abnormal, it shall issue an alarm signal, and meanwhile the curve is transferred to resistor type to prevent damaging the controller. It is detected always.
28	Flex. Sensor 2 Open	When the controller detects the sensor circuit is open, it shall issue an alarm signal. It is always detected.
29	Flex. Sensor 2 High	When over high alarm is enabled, and the controller detects the sensor value is above the preset upper limit, it shall issue an alarm signal. It is detected after 'safety on time' before 'ETS solenoid hold' when the sensor is selected as temperature sensor and pressure sensor; It is always detected when the sensor is selected as fuel level sensor.
30	Flex. Sensor 2 Low	When over low alarm is enabled, and the controller detects the sensor value is below the preset low limit, it shall issue an alarm signal. It is detected after 'safety on time' before 'ETS solenoid hold' when the sensor is selected as temperature sensor and pressure sensor; It is always detected when the sensor is selected as fuel level sensor.
31	Flex. Sensor 2 Wrong	When voltage or current input is selected for the curve type of the controller, and the controller detects input signal is abnormal, it shall issue an alarm signal, and meanwhile the curve is transferred to resistor type to prevent damaging the controller. It is detected always.
32	Flex. Sensor 3 Open	When the controller detects the sensor circuit is open, it shall issue an alarm signal. It is always detected.
33	Flex. Sensor 3 High	When over high alarm is enabled, and the controller detects the sensor value is above the preset upper limit, it shall issue an alarm signal. It is detected after 'safety on time' before 'ETS solenoid hold' when the sensor is selected as temperature sensor and pressure sensor; It is always detected when the sensor is selected as fuel level sensor.
34	Flex. Sensor 3 Low	When over low alarm is enabled, and the controller detects the sensor value is below the preset low limit, it shall issue an alarm signal. It is detected after 'safety on time' before 'ETS solenoid hold' when the sensor is selected as temperature sensor and pressure sensor; It is always detected when the sensor is selected as fuel level sensor.
35	Charge Alternator	When this is enabled, and the controller detects the charger voltage

No	Туре	Description
	Failure	value is below the preset limit, it shall issue an alarm signal.
		It is detected when the genset is normally running.
		When this is enabled, and the controller detects the battery voltage is
36	Battery Over Volt	above the preset limit, it shall issue an alarm signal.
		It is always detected.
		When this is enabled, and the controller detects the battery voltage is
37	Battery Under Volt	below the preset limit, it shall issue an alarm signal.
		It is always detected.
		If the controller doesn't detect sync. signal within the pre-set time, it will
38	Fail to Sync.	initiate an alarm signal.
		It is detected when GCB closes.
		When sync. transfer is enabled and controller detects gen switch
39	Gen Switch Alarm	close/open failure, controller issues an alarm signal;
		It is always detected.
		When sync. transfer is enabled and controller detects mains switch
40	Mains Switch Alarm	close/open failure, controller issues an alarm signal;
		It is always detected.
		When this is enabled, and when maintenance 1 countdown is equal to
	Maintenance Time 1	maintenance 1 countdown A or maintenance 1 countdown B, or
41	Due	maintenance 1 countdown is 0, controller will initiate an alarm signal.
		It is detected when the genset is running.
		When this is enabled, and when maintenance 2 countdown is equal to
	Maintenance Time 2	maintenance 2 countdown A or maintenance 2 countdown B, or
42	Due	maintenance 2 countdown is 0, controller will initiate an alarm signal.
		It is detected when the genset is running.
		When this is enabled, and when maintenance 3 countdown is equal to
	Maintenance Time 3	maintenance 3 countdown A or maintenance 3 countdown B, or
43	Due	maintenance 3 countdown is 0, controller will initiate an alarm signal.
		It is detected when the genset is running.
		When the digital input port is set users-defined and if it is active, the
44	Digital Input Alarm	controller will initiate an alarm signal for the input port.
		It is detected in the detection range set for the input port.
		When PLC function is set users-defined and if it is active, the controller
45	PLC Functions Alarm	will initiate an alarm signal.
10		It is detected in the detection range set by the PLC function.
		When DIN16 communication is enabled and the controller cannot
46	DIN16 Com. Fail	receive the communication data of DIN16, it will initiate an alarm signal.
		It is always detected.
<u></u> <u> </u> <u> </u> <u> </u> <u> </u> 7		When DIN16 input is set users-defined and if it is active, the controller
47	DIN16 Input Alarm	When DIN16 input is set users-defined and if it is active, the controller will initiate an alarm signal.
47	DIN16 Input Alarm	When DIN16 input is set users-defined and if it is active, the controller will initiate an alarm signal. It is detected in the detection range set in the input.
47	DIN16 Input Alarm DOUT16 Com. Fail	When DIN16 input is set users-defined and if it is active, the controller will initiate an alarm signal.

No	Туре	Description
		signal.
		It is always detected.
		When AIN24 communication is enabled and the controller cannot
49	AIN24 Com. Fail	receive the communication data of AIN24 module, it will initiate an alarm
49	Allv24 Colli. Fall	signal.
		It is always detected.
		When this is enabled and the controller detects cylinder temperature
50	AIN24 Cylinder Temp.	has exceeded the pre-set value, it will initiate an alarm signal.
	High	It is detected after 'safety on time' before 'ETS solenoid hold'.
		When this is enabled and the controller detects exhaust temperature
51	AIN24 Exhaust Temp.	has exceeded the pre-set value, it will initiate an alarm signal.
	High	It is detected after 'safety on time' before 'ETS solenoid hold'.
		When this is enabled and the controller detects cylinder temp. difference
52	AIN24 Cylinder Temp.	has exceeded the pre-set value, it will initiate an alarm signal.
	Difference High	It is detected after 'safety on time' before 'ETS solenoid hold'.
		When the controller detects the sensor circuit is open, it shall issue an
53	AIN24 Sensor Open	alarm signal.
		It is always detected.
		When over high alarm is enabled, and the controller detects the sensor
		value is above the pr <mark>eset up</mark> per limit, it shall issue an alarm signal.
54	AIN24 Sensor High	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low alarm is enabled, and the controller detects the sensor
		value is below the preset lower limit, it shall issue an alarm signal.
55	AIN24 Sensor Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When this is enabled and the controller detects that the generator power
56	Power Factor Low	factor has fallen below the pre-set limit, it will initiate an alarm signal.
		It is always detected.
	THD High	When this is enabled and the controller detects that the THD has
57		exceeded the pre-set limit, it will initiate an alarm signal.
		It is always detected.
		When this is enabled and the controller detects that the voltage
58	Gen Volt Unbalance	unbalanced value has exceeded the pre-set limit, it will initiate an alarm
50		signal.
		It is always detected.
		When AIN16-M02 is enabled, and when controller cannot receive the
59	AIN16-M02 Com. Fail	communication data of AIN16-M02 module, controller issues an alarm
59		signal;
		It is detected always.
60	AIN16-M02 Sensor	When controller detects sensor is open, controller issues an alarm

No	Туре	Description
	Open	signal;
		It is detected always.
		When over high alarm is enabled, and the controller detects the sensor
	AIN16-M02 Sensor	value is above the preset upper limit, it shall issue an alarm.
61		It is detected after 'safety on time' before 'ETS solenoid hold' when the
	High	sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low alarm is enabled, and the controller detects the sensor
	AIN16-M02 Sensor	value is below the preset lower limit, it shall issue an alarm.
62	Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
	LOW	sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
	AIN8 Com Fail	AIN8 enabled; when controller cannot receive AIN8 module
63		communication data, it will issue alarm signal;
		It is detected always.
64	AIN8 Sensor Open	When controller detects sensor open, it issues alarm signal;
04		It is detected always.
		Enabled; when the sensor value detected by the controller is over the
		pre-set upper limit, controller issues alarm signal;
65	AIN8 Sensor High	When sensor type selects temp sensor and pressure sensor, it is
		detected after safety on run before ETS stop;
		It is detected always when sensor type selects liquid level sensor.
		Enabled; when the sensor value detected by the controller is below the
		pre-set lower limit, controller issues alarm signal;
66	AIN8 Sensor Low	When sensor type selects temp sensor and pressure sensor, it is
		detected after safety on run before ETS stop;
		It is detected always when sensor type selects liquid level sensor.
		When BAC150CAN is enabled, and when controller cannot receive
67	BAC150CAN Com. Fail	communication data of BAC150CAN module, controller issues an alarm
		signal;
		It is always detected.

#### 6.4 TRIP AND STOP ALARMS

When controller detects trip and stop signals, it will open breaker directly and genset stops after cooling. Users need to reset alarms manually.

Туре	Description
Over Speed	When this is enabled, and the controller detects that the genset speed is
	above the pre-set limit, it will initiate an alarm signal.
	It is always detected.
Under Speed	When this is enabled and the controller detects that the genset speed is
	below the pre-set limit, it will initiate an alarm signal.
	Over Speed

#### Table 10 Trip Stop Alarms

No	Туре	Description
		It is detected after 'warming up' and before 'stop idle'.
		When the controller detects the genset speed is 0, it shall issue an alarm
3	Loss of Speed Signal	signal.
		It is detected after 'safety on time' and before 'ETS solenoid hold'.
		When this is enabled, and the controller detects the genset frequency is
4	Gen Over Frequency	above preset limit, it shall issue an alarm signal.
		It is detected always.
		When this is enabled, and the controller detects the frequency is below
5	Gen Under Frequency	the preset limit, it shall issue an alarm signal.
		It is detected after 'warming up' and before 'stop idle'.
		When this is enabled, and the controller detects the genset voltage is
6	Gen Over Voltage	above preset limit, it shall issue an alarm signal.
		It is detected always.
		When this is enabled, and the controller detects the voltage is below the
7	Gen Under Voltage	preset limit, it shall issue an alarm signal.
		It is detected after 'warming up' and before 'stop idle'.
		When this is enabled, and the controller detects the genset current is
8	Gen Over Current	above preset limit, it shall issue an alarm signal.
		It is detected always.
	Negative Sequence	When this is enabled, and the controller detects the unbalanced current
9	Current	is above preset limit, it shall issue an alarm signal.
		It is detected always.
		When this is enabled, and the controller detects the earth current is
10	Earth Fault	above the preset limit, it shall issue an alarm signal.
		It is always detected.
	Deven Deven	When this is enabled, and the controller detects the reverse power
11	Reverse Power	(negative) is above the preset limit, it shall issue an alarm signal.
		It is always detected.
10	Over Power	When this is enabled, and the controller detects the genset power
12	Over Power	(positive) is above the preset limit, it shall issue an alarm signal.
		It is always detected.
13	Loss Excitation	When this is enabled, and the controller detects the genset reactive power (negative) is above the preset limit, it shall issue an alarm signal.
13		It is always detected.
		When the controller receives the engine alarm signal from J1939, it shall
14	ECU Alarm	issue an alarm signal.
14		-
		It is always detected. When the controller detects the sensor circuit is open, it shall issue an
15	Temp. Sensor Open	alarm signal.
15		It is always detected.
		When this is enabled, and the controller detects the temp. is above the
16	Engine Temp High	preset limit, it shall issue an alarm signal.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
		The detected after safety of time before ETO Solehold hold.

No	Туре	Description
		When this is enabled, and the controller detects the temp. is below the
17	Engine Temp Low	preset limit, it shall issue an alarm signal.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
18		When the controller detects the sensor circuit is open, it shall issue an
	Oil Pressure Sensor Open	alarm signal.
		It is always detected.
		When this is enabled, and the controller detects the pressure is below
19	Oil Pressure Low	the preset limit, it shall issue an alarm signal.
		It is detected after 'safety on time' before 'ETS solenoid hold'.
		When voltage or current input is selected for the curve type of the
		controller, and the controller detects input signal is abnormal, it shall
20	Oil Pressure Sensor	issue an alarm signal, and meanwhile the curve is transferred to resistor
	Wrong	type to prevent damaging the controller.
		It is detected always.
	Evel Level Orecon	When the controller detects the sensor circuit is open, it shall issue an
21	Fuel Level Sensor	alarm signal.
	Open	It is always detected.
		When this is enabled, and the controller detects the level is below the
22	Fuel Level Low	preset limit, it shall is <mark>sue</mark> an alarm signal.
		It is always detected.
		When voltage or current input is selected for the curve type of the
		controller, and the controller detects input signal is abnormal, it shall
23	Fuel Level Sensor	issue an alarm signal, and meanwhile the curve is transferred to resistor
	Wrong	type to prevent damaging the controller.
		It is detected always.
		When the controller detects the sensor circuit is open, it shall issue an
24	Flex. Sensor 1 Open	alarm signal.
		It is always detected.
		When over high alarm is enabled, and the controller detects the sensor
		value is above the preset upper limit, it shall issue an alarm signal.
25	Flex. Sensor 1 High	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When over low alarm is enabled, and the controller detects the sensor
		value is below the preset low limit, it shall issue an alarm signal.
26	Flex. Sensor 1 Low	It is detected after 'safety on time' before 'ETS solenoid hold' when the
		sensor is selected as temperature sensor and pressure sensor;
		It is always detected when the sensor is selected as fuel level sensor.
		When voltage or current input is selected for the curve type of the
		controller, and the controller detects input signal is abnormal, it shall
27	Flex. Sensor 1 Wrong	issue an alarm signal, and meanwhile the curve is transferred to resistor
		type to prevent damaging the controller.
		It is detected always.

HGM9420N\_HGM9420LT controller back panel is as below:

# Fig. 4 Controller Rear Panel

# Table 12 Terminal Connection Description

No.	Functions	Cable Size	Remark	
1	B-	2.5mm <sup>2</sup>	Connect with starter battery negative.	
			Connect with starter battery positive. If wire length is	
2	B+	2.5mm <sup>2</sup>	over 30m, it's better to double wires in parallel. Max. 20A	
			fuse is recommended.	
3	Emergency Stop Input	2.5mm <sup>2</sup>	Connect with B+ via emergency stop button.	
4	Fuel Relay Output	1.5mm <sup>2</sup>	B+ is supplied by 3 points, rated 16A.	
5	Crank Relay Output	1.5mm <sup>2</sup>	B+ is supplied by 3 points, rated 16A.	
5			Connect to starter coil.	
6	Digi. Output 1	1.5mm <sup>2</sup>	B+ is supplied by 2 points, rated 8A.	
7	Digi. Output 2	1.5mm <sup>2</sup>	B+ is supplied by 2 points, rated 8A.	
8	Digi. Output 3	1.5mm <sup>2</sup>	B+ is supplied by 2 points, rated 8A.	
9	Digi. Output 7	1.5mm <sup>2</sup>	DC30V supply (negative) output (transistor), rated 1A.	
10	Digi. Output 8	1.5mm <sup>2</sup>	DC30V supply (negative) output (transistor), rated 1A.	
	Charger (D+)	1.0mm <sup>2</sup>	Connect with Charger D+ (WL) terminal. If this terminal	
11			doesn't exist, hang it in the air.	
12	Digi. Input 1	1.0mm <sup>2</sup>	Ground connected is active (B-).	

#### **Smart**Gen ideas for powe

No.	Functions	Cable Size	Remark	
13	Digi. Input 2	1.0mm <sup>2</sup>	Ground connected is active (B-).	
14	Digi. Input 3	1.0mm <sup>2</sup>	Ground connected is active (B-).	
15	Digi. Input 4	1.0mm <sup>2</sup>	Ground connected is active (B-).	
16	Digi. Input 5	1.0mm <sup>2</sup>	Ground connected is active (B-).

Smart Gen

# HGM9420N\_HGM9420LT GENSET CONTROLLER USER MANUAL

No.	Functions	Cable Size	Remark
49	Gen L3 Phase Voltage Input	1.0mm <sup>2</sup>	Connect to Gen L3 Phase (2A fuse is recommended).
50	Gen N Wire Input	1.0mm <sup>2</sup>	Connect to Gen output N wire.
51	CT A-phase Input	1.5mm <sup>2</sup>	Connect to CT secondary coil (rated 5A) externally.
52	CT B-phase Input	1.5mm <sup>2</sup>	Connect to CT secondary coil (rated 5A) externally.
53	CT C-phase Input	1.5mm <sup>2</sup>	Connect to CT secondary coil (rated 5A) externally.
54	CT COM	1.5mm <sup>2</sup>	Please refer to following installation illustration.
55	Forth CT Innut	1.5mm <sup>2</sup>	Outside connect to CT accordery soil (roted 5A)
56	Earth CT Input	1.5mm <sup>2</sup>	Outside connect to CT secondary coil (rated 5A).
57	Engine Temp. Sensor	1.0mm <sup>2</sup>	Connect to temperature resistance sensor.
58	Oil Pressure Sensor	1.0mm <sup>2</sup>	Connect to engine oil pressure sensor. Voltage type (0V-10V), current type (4mA-20mA) and resistance sensor can be chosen.
59	Fuel Level Sensor	1.0mm <sup>2</sup>	Connect to fuel level resistance sensor. Voltage type (0V-10V), current type (4mA-20mA) and resistance sensor can be chosen.
60	Flex. Sensor 1	1.0mm <sup>2</sup>	Connect to temp. /fuel level/pressure type sensor. Voltage type (0V-10V), current type (4mA-20mA) and resistance sensor can be chosen.
61	Flex. Sensor 2	1.0mm <sup>2</sup>	Connect to temp. /fuel level/pressure type sensor. Voltage type (0V-10V), current type (4mA-20mA) and resistance sensor can be chosen.
62	Flex. Sensor 3	1.0mm <sup>2</sup>	Connect to temp. /fuel level/pressure resistance sensor.
63	VOUT(+5V)	1.0mm <sup>2</sup>	Provide +5V voltage for voltage type sensor, and current is below 50mA.
64	Sensor COM.	/	Public sensor terminal, and battery negative is already connected in the controller.
65	RS485(1) B(-)	0.5mm <sup>2</sup>	Impedance-120 $\Omega$ shielding wire is recommended, and
66	RS485(1) A(+)	0.5mm <sup>2</sup>	the single-end shall be earth connected. Short connect
67	RS485(1) TR	/	TR with A(+) and then connect to $120\Omega$ terminal resistor.
68	RS485(2) B(-)	0.5mm <sup>2</sup>	Impedance-120 $\Omega$ shielding wire is recommended, and
69	RS485(2) A(+)	0.5mm <sup>2</sup>	the single-end shall be earth connected. Short connect
70	RS485(2) TR	/	TR with A(+) and then connect to $120\Omega$ terminal resistor.

**ANOTE 1**: USB ports on the controller rear panel are configurable parameter ports, and users can directly program the controller on PC.

**ANOTE 2**: The main USB port on the controller rear panel is U flash, by which controller parameters can be lead in or export out.

**ANOTE 3**: Expansion SGE02-4G module can be inserted on the back panel.

#### 8 SCOPES AND DEFINITIONS OF PROGRAMMABLE PARAMETERS

#### 8.1 CONTENTS AND SCOPES OF PARAMETERS

# Table 13 Parameter Configuration Contents and Range

No.	Items	Parameters	Defaults	Description
Modu	ule Setting			
1.	Power On Mode	(0-2)	0	0: Stop Mode 1: Manual Mode 2: Auto Mode
2.	Module Address	(1-254)	1	Controller address for remote monitoring
3.	Language	(0-2)	0	0: Simplified Chinese 1: English 2: Other
4.	Password	(0-65535)	00318	It is used to enter advanced parameter setting.
5.	Daylight Saving Time	(0-1)	0	0: Disable 1: Enable Start and end time for this can be set.
6.	Date and Time			It is used for date and time settings.
7.	Temperature Unit	(0-1)	0	0: °C; 1: °F
8.	Pressure Unit	(0-2)	0	0: kPa 1: psi 2: bar
9.	Backlight Time	(0- <mark>36</mark> 00)s	300	
10.	Network	(0-1)	1	0: Disable 1: Enable
11.	J1939-75	(0-1)	0	0: Disable 1: Enable
12.	Alarm Data Interv.	(0-60.0)s	0.1	
13.	Custom Protocol	(0-1)	0	0: Disable 1: Enable
14.	Fn Function	(0-6)	0	0: Fn Button 1: Stop Button 2: Start Button 3. Manual Button 4. Auto Button 5: Mains Load Btn 6: Gen Load Btn
Main	s Setting	1	1	
1.	Mains Options	(0-2)	1	0: Disable; 1: AMF; 2: Only Indication
2.	AC System	(0-3)	0	0: 3P4W 1: 3P3W 2: 2P3W 3: 1P2W

#### Smart Gen ideas for power

No.	Items	Parameters	Defaults	Description
3.	Normal Time	(0-3600)s	10	Check time from Mains abnormal to normal;
4.	Abnormal Time	(0-3600)s	5	Check time from Mains normal to abnormal;
5.	Loss of Phase	(0-1)	1	, .,,
6.	Phase Seq. Wrong	(0-1)	1	0: Disable; 1: Enable
7.	Rated Voltage	(30-30000)∨	230	Provide standards for Mains overvoltage and undervoltage; if PT is fitted, this value is primary voltage of PT;
8.	PT Fitted	(0-1)	0	0: Disable; 1: Enable
9.	Over Voltage	(0-1) (0-200)% (0-200)% (0-3600)s	1 120 116 5	Set value is percentage of Mains rated
10.	Under Voltage	(0-1) (0-200)% (0-200)% (0-3600)s	1 80 84 5	voltage; Return and delay value can also be set.
11.	Rated Frequency	(10.0-75.0)Hz	50.0	Provide standards for Mains over frequency and under frequency.
12.	Over Frequency	(0-1) (0-200.0)% (0-200.0)% (0-3600)s	0 114.0 110.0 5	Set value is percentage of Mains rated
13. Time	Under Frequency	(0-1) (0-200.0)% (0-200.0)% (0-3600)s	0 90.0 94.0 5	frequency; Return value and delay value can also be set.
Time	r Setting			Time from mains the second second state
1.	Start Delay	(0~3600)s	5	Time from mains abnormal or remote start signal is active to genset is starting.
2.	Stop Delay	(0~3600)s	30	Time from mains abnormal or remote start signal is active to genset is stopping.
3.	Pre-heat Delay	(0~3600)s	0	Time for pre-powering the heat plug before starter is powered up.
4.	Fuel Delay	(1-3600)s	1	Fuel output time before crank output.
5.	Cranking Time	(3~60)s	8	Time for starter power on each time.
6.	Crank Rest Time	(3~60)s	10	The waiting time before second power up when engine start fails.
7.	Safety On Time	(0-3600)s	10	Alarms for low oil pressure, high temperature, under speed, under frequency /voltage, charge fail are inactive.
8.	Start Idle Time	(0~3600)s	10	Running time for genset idling speed when the genset is starting.

No.	Items	Parameters	Defaults	Description
9.	Warming Up Time	(0~3600)s	30	Warming up time between genset switch on and high speed running.
10.	Cooling Time	(0~3600)s	60	Radiating time before genset stop, after it unloads.
11.	Stop Idle Time	(0~3600)s	10	Running time for genset idling speed when the genset is stopping.
12.	ETS Hold Time	(0~3600)s	20	Time for the stop electromagnet energization as the genset is stopping.
13.	Fail to Stop	(0~3600)s	0	Time after 'idle delay' is over before the complete stop when 'ETS Hold Time' is set "0"; time after 'ETS Hold Time' delay is over before the complete stop when it is set other than "0".
14.	After Stop Time	(0~3600)s	0	Time between a complete stop and standby.
15.	Gas Engine Timers	(0-1)	0	0: Disable 1: Enable
16.	Choke On Time	(0-60)s	0	Output time for gas thickening after the engine starts.
17.	Gas On Delay	(0-60)s	0	
18.	Ignition Off	(0-60)s	0	
19.	Smart Pre-heat	(0-1) (0-3) (0-300)℃	0 0 40	<ul> <li>0: Disable 1: Enable</li> <li>When it is enabled, the controller will stop pre-heating earlier according to the set conditions.</li> <li>Sensors are available, and when it is above the set value, it shall end the pre-heating.</li> <li>0: Disable 1: Enable</li> </ul>
20.	Smart Start Idle	(0-1) (0-3) (0-300)℃	0 0 50	When it is enabled, the controller will stop pre-heating earlier according to the set conditions. Sensors are available, and when it is above the set value, it shall end start idle process.
	ne Setting			
1.	Engine Type	(0~39)	0	Default: non-ECU engine
2.	Flywheel Teeth	(10~300)	118	Tooth number of the engine, for judging of starter separation conditions and inspecting of engine speed. See back installation instructions.
3.	Rated Speed	(0~6000)r/min	1500	Offer standard to judge over/under/loading speed.
4.	Loading Speed	(0~100.0)%	90.0	Set value is percentage of rated speed. Controller detects when it is ready to load. It won't enter normal running period when

No.	Items	Parameters	Defaults	Description
				speed is under loading speed.
5.	Start Attempts	(1-10) times	3	Maximum start times for start failures; when it reaches up to the set value, controller will issue failed to start signal.
6.	Disc. Condition	(0-6)	2	Please refer to Table 17. 3 kinds of conditions for starter and engine separation; the 3 can be used separately, or used simultaneously; purpose is to separate motor and engine as soon as possible.
7.	Disconnect Freq	(0-200)%	24	Set value is gen rated frequency percentage; when gen freq is above pre-set value, starter will separate; Please refer to back installation illustration.
8.	Disconnect Speed	(0-200)%	24	Set value is rated speed percentage; when speed is above pre-set value, starter will separate; Please refer to back installation illustration.
9.	Disconnect OP	(0-1000)kPa	200	When engine oil pressure is above pre-set value, starter will separate; Please refer to back installation illustration.
10.	ECU Malfunc. Lamp	(0-5)	1	
11.	ECU Stop Lamp	(0-5)	5	0: None; 1: Warning; 2: Block; 3: Trip; 4:
12.	ECU Warning Lamp	(0-5)	1	Trip Stop; 5: Shutdown
13.	ECU Protect Lamp	(0-5)	1	
14.	Battery Voltage	(0-60.0)V	24.0	Provide standards for battery over voltage and under voltage.
		(0-1)	1	0: Disable 1: Enable
		(0-200.0)%	120.0	Set value is batt. rated volt percentage.
15.	Battery OV 1	(0-200.0)%	115.0	Return value is batt. rated volt percentage.
		(0-3600)s	60	Delay value
		(0-5)	1	Action
		(0-1)	0	0: Disable 1: Enable
16	Potton (O) ( )	(0-200.0)%	120.0 115.0	Set value is batt. rated volt percentage.
16.	Battery OV 2	(0-200.0)% (0-3600)s		Return value is batt. rated volt percentage.
		(0-3600)s (0-5)	60 0	Delay value Action
		(0-3)	1	0: Disable 1: Enable
		(0-1)	85.0	Set value is batt. rated volt percentage.
17.	Battery UV 1	(0-200.0)%	90.0	Return value is batt. rated volt percentage.
		(0-3600)s	60	Delay value
		(0-5)	1	Action
		(0-1)	0	0: Disable 1: Enable
18.	Battery UV 2	(0-200.0)%	85.0	Set value is batt. rated volt percentage.
				in the second

No.	Items	Parameters	Defaults	Description
		(0-200.0)%	90.0	Return value is batt. rated volt percentage.
		(0-3600)s	60	Delay value
		(0-5)	0	Action
		(0-1)	1	0: Disable 1: Enable
		(0-60.0)V	8.0	Set Value
19.	Charge Alt Fail	(0-60.0)V	10.0	Return Value
		(0-3600)s	10	Delay Value
		(0-5)	1	Action
		(0-1)	0	0: Disable 1: Enable
		(0-60.0)V	46.6	Start Value
20.	DC Volt. Start	(0-60.0)V	53.8	Stop Value
		(0-3600)s	60	Delay Value
				Time from detecting speed is 0 to action
21.	Loss of Speed Delay	(0-3600)s	5	check.
				0: None; 1: Warning; 2: Block; 3: Trip; 4:
22.	Loss of Speed Act	(0-5)	5	Trip Stop; 5: Shutdown
				Set value is rated speed percentage; delay
23.	Over Speed Stop	(0-200)%	114	value can also be set.
24.	Under Speed Stop	(0-200)%	80	Set value is rated speed percentage; return
25.	Over Speed Warn	(0-200)%	110	value and delay value can also be set.
26.	Under Speed Warn	(0-200)%	86	
20.	Battery Voltage	(0-200)/8 (0-60.0)V	24.0	Provide standards for battery over voltage
21.	Dallery Vollage	(0-00.0)	24.0	and under voltage;
				Set value is percentage of battery rated
28.		(0-200)%	120	voltage; return value and delay value can
	Battery OV Warn			also be set.
29.	Battery UV Warn	(0-200)%	85	
23.	Dattery OV Wall	(0-200)78	00	During genset normal running process,
30.		(0-60.0)V	8.0	when charger D+ (WL) voltage is lower than
50.	Charge Alt Fail	(0-00.0)	0.0	this value, it issues failure warning;
		(0-1)	1	0: Disable 1:Enable
		(0-1)	114.0	Set value is rated speed percentage;
31.		(0-200.0)%	112.0	Return value is rated speed percentage;
51.		(0-3600)s	2	Delay value
	Over Speed 1	(0-5000)3	5	Action
		(0-5)	5 1	0: Disable 1:Enable
		(0-1)	110.0	Set value is rated speed percentage;
32.		(0-200.0)%	108.0	Return value is rated speed percentage;
52.		(0-200.0)% (0-3600)s	5	Delay value
	Over Speed 2	(0-3600)s (0-5)	5	Action

Sync	Sync Setting				
	Sync				
1	Check Enable	(0-1)	0	0: Disable; 1: Enable	
2	Check Volt	(0-30)V	3	Voltage difference of Gen and Mains; if it is below sync volt difference, then volt sync is considered.	
3	Check Pos Freq	(0-2.00)Hz	0.20	Freq difference of Gen and Mains; if it is	
4	Check Neg Freq	(0-2.00)Hz	0.10	below positive difference of sync, and above negative difference of sync, freq sync is considered.	
5	Check Phase Ang	(0-20)°	10	Primary phase difference of Gen and Mains, if it is below phase angle difference of sync, phase sync is considered.	
6	Fail Sync Act	(0-5)	0	0: None; 1: Warning; 2: Block; 3: Trip; 4: Trip Stop; 5: Shutdown	
7	Fail Sync Delay	(0-3600)s	120	Maximum waiting sync time; if time is due, but it still doesn't meet sync condition, then alarm is issued.	
8	Fail Transl. Time	(0.1-1.0)s	0.6	At sync transfering, sync close or open	

No.	Items	Parameters	Defaults	Description
				output delay starts; during the delay if correct close/open status is detected, then close/open pulse output is stopped; if after the delay correct status still is not detected, then alarm is issued; NOTE: if sync close/open detection time is smaller than close/open time, then sync close/open time is switch close/open time.

8	Custom Combined 2	
9	Custom Combined 3	
10	Custom Combined 4	
11	Custom Combined 5	
12	Custom Combined 6	
13	Reserved	
14	Reserved	
15	Gas Choke On	
16	Gas Ignition	
17	Air Flap Control	Act on over speed shutdown and emergence stop. Air inflow
17		can be closed.
		Act on warning, block, trip, trip and stop, and shutdown. An
18	Audible Alarm	annunciator can be connected externally. If 'alarm mute'
		configurable input port is active, this is prohibited.
19	Louver Control	Act when genset is starting and disconnect when genset is
		stopped completely.
20	Fuel Pump Control	It is controlled by limit values of level sensor fuel pump.
21	Heater Control	It is controlled by heating limit values of temperature sensor.
22	Cooler Control	It is controlled by cooler limit values of temperature sensor.
23	Pre-fuel	Act in the period from 'cranking' to 'safety on'.
24	Generator Excite	Output in start process. If there is not generator frequency
		during hi-speed running, it shall output for 2 seconds again.
25	Pre-lubricate	Act from pre-heating to safety on.
26	Remote Control	This port is controlled by communication (PC).
27	Reserved	
28	Open Breaker	Control breaker offload when sync. transfer is not enabled.
29	Close Gen Output	It can control generating switch to take load.
30	Open Gen Breaker	It can control generating switch to take off load when sync.
		transfer is enabled.

No.	Туре	Description
31	Close Mains Output	It can control mains switch to take load.
22	Open Mains Breaker	It can control mains switch to take off load when sync. transfer
32		is enabled.
33	Start Relay	
		Act when genset is starting and disconnect when stop is
34	Fuel Relay	completed.
		When gas timer is enabled, fuel relay output is used to control
		gas valve.
		It is used for engine with idling control. Close before starting
35	Idle Control	and open in warming up delay; Close during stopping idle
		mode and open when stop is completed.
36	Speed Raise Relay	Act during warming up time.
37	Speed Drop Relay	Act between the period 'stop idle' and 'failed to stop'.
38	Energize to Stop	It is used for engines with ETS electromagnet. Close when
	5 1	stop idle is over and open when pre-set 'ETS delay' is over.
39	Speed Drop Pulse	Act for 0.1s when controller enters 'stop idle', used for control
		parts of ECU dropping to idle speed.
40	ECU Stop	Used for ECU engine to control its stop.
41	ECU Power Supply	Used for ECU engine to control its power.
42	Speed Raise Pulse	Act for 0.1s when controller enters warming up delay; used for
		control parts of ECU raising to normal speed.
43	Crank Success	Close when a successful start signal is detected.
44	Generator OK	Act when generator is normally running.
45	Generator Available	Act between normal running and hi-speed cooling.
46	Mains OK	Act when mains is normal.
47	Reserved	Act when controller is synchronizing.
		Act when genset common warning, common shutdown,
48	Common Alarm	common trip, common trip and stop, common block alarms
		occur.
49	Common Trip and Stop	Act when common trip and stop alarm occurs.
50	Common Shutdown	Act when common shutdown alarm occurs.
51	Common Trip	Act when common trip alarm occurs.
52	Common Warning	Act when common warning alarm occurs.
53	Common Block	Act when common block alarm occurs.
54	Battery Over Voltage	Act when battery's over voltage warning alarm occurs.
55	Battery Under Voltage	Act when battery's low voltage warning alarm occurs.
56	Charge Alternator Failure	Act when charging failure warning alarm occurs.
57	Reserved	
58	Reserved	
59	Reserved	
60	ECU Warning	Indicates ECU sends a warning signal.
61	ECU Shutdown	Indicates ECU sends a shutdown signal.

No.	Туре	Description
62	ECU Com Fail	Indicates controller is not communicating with ECU.

296-299	Reserved	

### 8.2.2 DEFINED PERIOD OUTPUT

Defined Period output is composed by 2 parts, period output S1 and condition output S2.

While **S1** and **S2** are **TRUE** synchronously, OUTPUT;

While S1 or S2 is FALSE, NOT OUTPUT.

**Period output S1** can set generator's one or more period outputs freely, can set the delayed time and output time after entering into period.

Condition output S2 can set as any conditions in output ports.

**ANOTE 1:** when delay time and output time both are 0 in period output S1, it is TRUE in this period.

**ANOTE 1:** when selected period is standby, it is cycle output, and other periods are single output.

For example:

Output period: start

Delay output time: 2s

Output time: 3s

Condition output contents: output port 1 is active

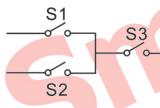

Close when condition output active/inactive: close when active (disconnect when inactive);

Output port 1 active, after enter "starts time" and delay 2s, this defined period output is outputting, after 3s, stop outputting;

Output port 1 inactive, defined output period is not outputting.

### 8.2.3 DEFINED COMBINATION OUTPUT

Defined combination output is composed by 3 parts, or condition output S1, or condition output S2 and and condition output S3.

S1 or S2 is **TRUE**, while S3 is **TRUE**, defined combination output is outputting;

S1 and S2 are FALSE, or S3 is FALSE, defined combination output is not outputting.

**ANOTE:** S1, S2, S3 can be set as any contents except for "defined combination output" itself in the output setting.

**ANOTE:** 3 parts of defined combination output (S1, S2, S3) couldn't include or recursively include themselves. For example:

Contents of or condition output S1: output port 1 is active;

Close when or condition output S1 is active /inactive: close when active (disconnect when inactive);

Contents of or condition output S2, output port 2 is active;

Close when or condition output S2 is active /inactive: close when active (disconnect when inactive);

Contents of or condition output S3: output port 3 is active;

Close when or condition output S3 is active /inactive: close when active (disconnect when inactive);

When input port 1 active or input port 2 active, if input port 3 is active, Defined combination output is outputting; If input port 3 inactive, Defined combination output is not outputting;

When input port 1 inactive and input port 2 inactive, whatever input port 3 is active or not, Defined combination output is not outputting.

# 8.3 DEFINED CONTENTS OF PROGRAMMABLE INPUT PORTS

# Table 15 Definition of Digital Input Ports 1-10 (GND Connected (B-) is active)

No.	Туре	Description	
		Users-defined alarm.	
		Active range:	
0	Users Configured	Never: input inactive.	
0		Always: input is active all the time.	
		From crank: detecting as soon as start.

		4 SGD	sensor.
		5 SGH	
		6~15 Reserved	

**ANOTE:** The input signal of Pressure, Fuel Level, flexible sensor 1, flexible sensor 2 can be resistance, current and voltage.

#### 8.5 CONDITIONS OF CRANK DISCONNECT SELECTION

#### **Table 17 Crank Disconnect Conditions**

No.	Setting Description	
0	Frequency	
1	Speed	
2	Speed + Frequency	
3	Oil pressure	
4	Oil pressure + Frequency	
5	Oil pressure + Speed	
6	Oil pressure + Speed + Frequency	

## **A**NOTES:

1) There are 3 conditions to make starter disconnected with engine, that is, speed, frequency and engine oil pressure. They all can be used separately. We recommend that engine oil pressure should be used with speed and generator frequency together, in order to make the starter motor separated with engine immediately and can check crank disconnect exactly.

2) Speed sensor is the magnetic equipment which is installed in starter for detecting flywheel teeth.

3) When it is set as speed sensor, users must ensure that the number of flywheel teeth is the same as setting, otherwise, "over speed stop" or "under speed stop" may be caused.

4) If genset is without magnetic sensor, please don't select corresponding items, otherwise, "start fail" or "loss speed signal" may be caused.

5) If genset is without oil pressure sensor, please don't select corresponding items.

6) If speed sensor is not selected in crank disconnect setting, the speed displayed on controller is calculated by generating signals.

### 9 PARAMETERS SETTING

Please change the controller parameters when generator is in standby mode only (e. g. Start conditions selection, configurable input, configurable output, various delay etc.), otherwise, alarming to stop and other abnormal conditions may happen.

**ANOTE:** Maximum set value must over minimum set value in case that the condition of too high as well as too low will happen.

**ANOTE:** When the warning alarm is set, please set the correct return value; otherwise, maybe there is abnormal alarm. When the maximum value is set, the return value must be less than the set value; when the minimum value is set, the return value must be less than the set value; when the minimum value is set, the return value must be over the set value.

**ANOTE:** Please set the generator frequency value as low as possible when the genset is cranking, in order to make the starter separated quickly as soon as crank disconnection happens.

**CONTE:** Configurable input could not be set as the same items; otherwise, there are abnormal functions. However, the configurable output can be set as the same items.

Cycle start is to control two gensets to start circularly. Two gensets are connected by CAN(2) or RS485(2). Master can control backup to start/stop genset by sending commands and check backup fault status. Master and backup can be set by parameter configurations, or decided by input setting. It is only active in Auto mode.

Operation procedure:

- a) Master waits for start and when remote start input is active, it starts automatically. Running time is the pre-set "Master Running" time;
- b) "Master Running" is over or shutdown alarm occurs; and when backup remote start input is active, backup starts; when backup runs normally, master stops; backup running time is the pre-set "Obey Running" time;
- c) In the whole process, master and backup can change current status information at real time by CAN(2) and RS485(2); when running time is over or backup shutdown alarm occurs, master starts and it goes like this circularly;
- d) When communication is interrupted, controller issues "Cycle Com Fail" alarm; when master remote start input is active, master starts; when backup remote start input is active, backup starts.

### 11 SENSOR SETTING

1) When sensors are reselected, the sensor curves will be transferred into the standard value. For example, if temperature sensor is SGH ( $120^{\circ}$ C resistor type), its sensor curve is SGH ( $120^{\circ}$ C resistor type); if select the SGD ( $120^{\circ}$ C resistor type), the temperature sensor curve is SGD curve.

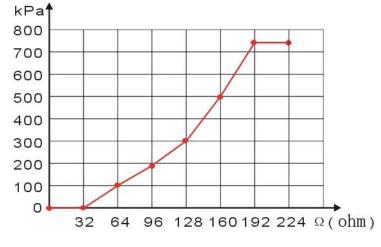

2) When there is difference between standard sensor curves and used sensor curves, users can select custom sensor curve and input self defined sensor curve.

3) When the sensor curve is inputted, x value (resistor) must be inputted from small to large, otherwise, mistake occurs.

4) If sensor type is selected as "none", sensor curve is not working.

5) If the corresponding sensor has alarm switch only, users must set this sensor as "none", otherwise, shutdown or warning may occur.

6) The headmost or backmost values in the vertical coordinates can be set as the same as below.

### Fig. 5 Sensor Curve Diagram

CC

### Table 18 Normal Pressure Unit Conversion Form

	ра	kgf/cm <sup>2</sup>	bar	psi
1Pa	1	$1.02 \times 10^{-5}$	$1 \times 10^{-5}$	$1.45 \times 10^{-4}$
1kgf/cm <sup>2</sup>	9.8x10 <sup>4</sup>	1	0.98	14.2
1bar	1x10 <sup>5</sup>	1.02	1	14.5
1psi	6.89x10 <sup>3</sup>	7.03x10 <sup>-2</sup>	6.89x10 <sup>-2</sup>	1

#### 12 COMMISSIONING

Please make sure the following checks are made before commissioning,

- Ensure all the wiring connections are correct and wire diameter is suitable.
- Ensure that the controller DC power has fuse, and controller's positive and negative and start battery are correctly connected.
- Emergency stop input is connected to the positive pole of starter battery via emergency stop button's normally closed point and fuse.
- Take proper actions to prevent engine from cranking successfully (e. g. Remove the connection wire of fuel valve). If checking is OK, make the start battery power on; choose manual mode and controller will executive routine.
- Set controller under manual mode, press "start" button, and genset will start. After the cranking times set before, controller will send signal of Start Failure; then press "stop" to reset controller.
- Recover the action to prevent engine from cranking successfully (e. g. Connect wire of fuel valve), press start button again, and genset will start. If everything goes well, genset will be normally running after idle running (if idle run is set). During this time, please watch engine's running situation and AC generator's voltage and frequency. If there is something abnormal, stop genset and check all wiring connections according to this manual.
- Select the AUTO mode from controller's panel, and connect mains signal. After the mains normal delay, controller will transfer ATS (if set) into mains onload. After cooling time, controller will stop genset and make it into "at rest" mode until there is mains abnormal situation.
- When mains is abnormal again, genset will be started automatically and enter into normal running, then controller send signal to make generator switch on, and control the ATS transfer into generator load. If it is not like this, please check ATS wiring connection according to this manual.
- If there is any other question, please contact SmartGen's service.

### **13 TYPICAL APPLICATION**

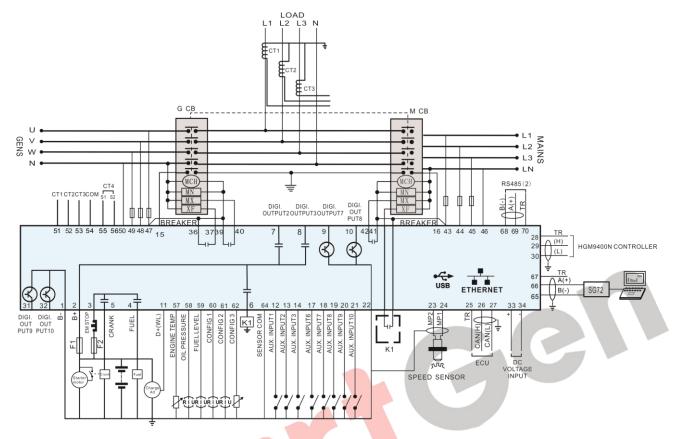

Fig. 6 HGM9420N\_HGM9420LT Sync Transfer Typical Application Diagram

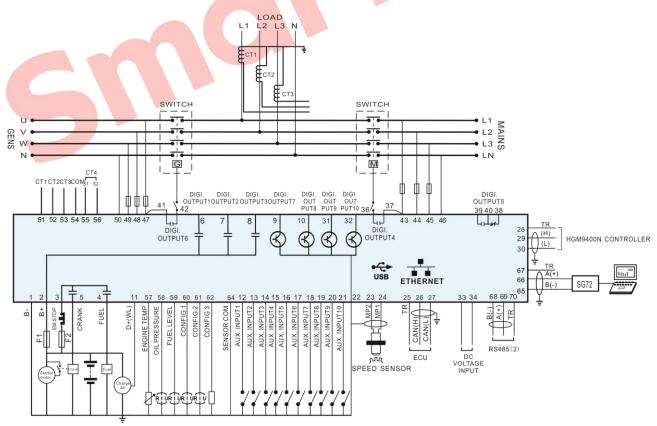

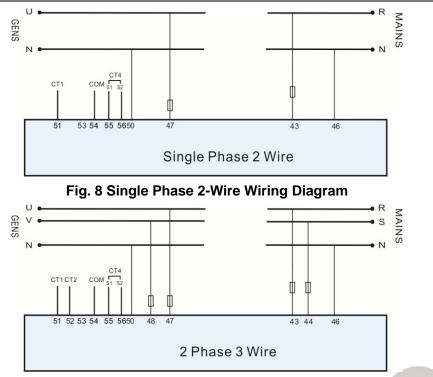

Fig. 7 HGM9420N\_HGM9420LT Typical Application Diagram

## Fig. 9 2-Phase 3-Wire Wiring Diagram

NOTE: It is recommended to expand large capacity relay for Crank, and Fuel output terminals.

### 14 NEL TRIP DESCRIPTION

Non-essential Load----NEL is the abbreviation.

The controller can control the NEL1, NEL2 and NEL3 to trip separately. The order of the essentiality is: NEL3 > NEL2 > NEL1

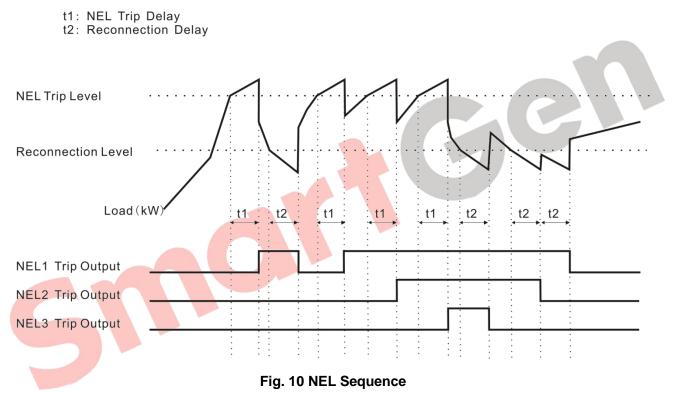

• Auto Trip:

When NEL auto trip is enabled:

If the genset power has exceed the NEL trip value, after the trip delay, NEL1 will trip the earliest, and then is NEL2, NEL3;

When NEL auto reconnection is enabled:

If the genset power has fallen below the auto reconnection set value, after the auto reconnection delay, NEL3 will reconnect the earliest, and then is NEL2, NEL1;

## Manual Trip

If NEL manual trip input is active (earthed failing edge is active), NEL1 will trip without delay; If NEL manual trip input is active again, NEL2 will trip; If NEL manual trip input is active the third time, NEL3 will trip.

If NEL manual reconnection input is active (earthed failing edge is active), NEL3 will reconnect without delay; If NEL manual reconnection input is active again, NEL2 will reconnect; If NEL manual reconnection input is active for the third time, NEL1 will reconnect. During this process, the genset power: judges if the genset power has fallen below the NEL reconnection value. If genset power is less than NEL reconnection value, then the input is active; otherwise the input is deactivated.

**ANOTE:** When auto trip and auto reconnection are enabled, manual trip is still active.

### 15 DUMMY LOAD CONNECTION

Dummy Load ---- DL for short.

The controller can control the 3 ways of DL connect separately. The order of the essentiality is: DL1 > DL2 > DL3

Auto operation:

When DL auto connect is enabled:

If the genset power has fallen below the DL connection value, after the connection delay, DL1 will connect the earliest, and then is DL2, DL3;

When DL auto disconnect is enabled:

If the genset power has exceed the DL disconnect value, after the disconnect delay, DL3 will disconnect the earliest, and then is DL2, DL1;

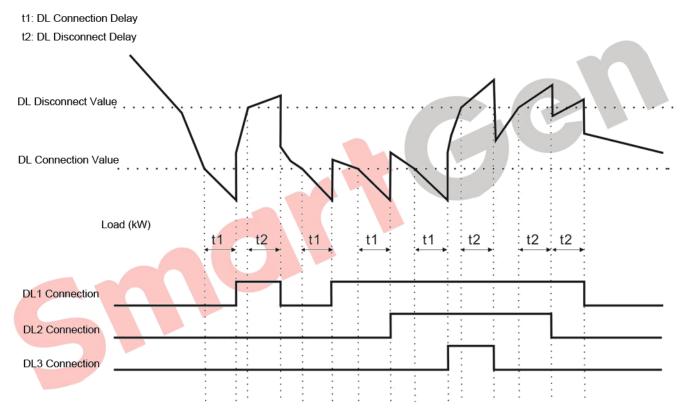

Fig. 11 DL Sequence

Manual Operation

If manual DL connect input is active (earthed failing edge is active), DL1 will connect without delay; If manual DL connect input is active again, DL2 will connect; If manual DL connect input is active the third time, DL3 will connect. During this process, the controller will detect if the genset power has fallen the DL connection value or not. If genset power is below DL connection value, this input is active, otherwise, it will be ignored.

If manual DL disconnect input is active (earthed failing edge is active), DL3 will disconnect without delay; If manual DL disconnect input is active again, DL2 will disconnect; If manual DL disconnect input is active the third time, DL1 will disconnect.

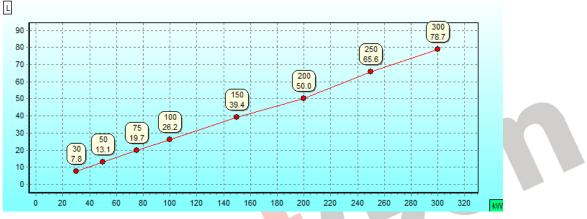

**ANOTE:** When auto connection and auto disconnection are enabled, manual operation is still active.

### **16 OIL CONSUMPTION ILLUSTRATION**

Oil consumption parameters include: oil tank remaining fuel, real time oil consumption, fuel remaining time.

Remaining fuel is calculated by fuel level sensor value and the pre-set oil tank volume.

Real-time oil consumption is calculated by real-time active power and oil consumption curve. About oil consumption curve settings, set genset power and the corresponding oil consumption volume per hour, set curve X axis (1-8) points to genset power (kW), and set curve Y axis (1-8) points to genset oil consumption volume per hour. Real-time oil consumption is as below:

Fuel remaining time is equal to the remaining fuel dividing genset oil consumption per hour. **NOTE**: It needs to enable Fuel Level Sensor, Oil Tank Capacity, Real-time Oil Consumption Curve.

## 17 ETHERNET PORT

Ethernet port can be used to monitor the controller, which can realize network client terminal connection. **NOTE:** After changing network setting parameters (IP address, subnet mask etc.) of the controller, it needs to power on the controller again, so that new parameter settings can be valid.

As network client, controller can be monitored via network port by TCP/IP Modbus protocol by users. Steps are as below:

- Set controller IP address and subnet mask, the set IP address needs to be in the same stage with monitoring device (PC), but they are different. For example: IP address of monitoring device is 192.168.0.16, then IP address of controller needs to set to 192.168.0.18, and subnet mask is 255.255.255.0.
- 2. Connect controller. Users can directly use network wire to connect monitoring device and controller; interchanger is Okay as well.
- 3. Monitoring device uses TCP Modbus protocol to communicate with controller.

**NOTE:** Controller parameters can be set in this connection mode. Test software of our company can connect in this way. Ask for the communication protocol from our company personnel.

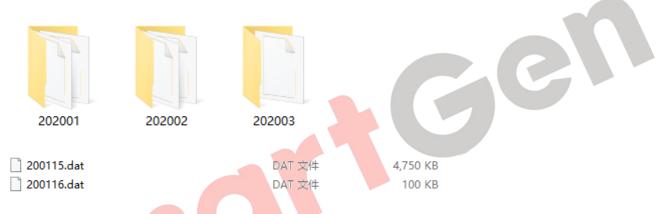

### 18 HOST USB PORT

HGM9420N\_HGM9420LT controller supports to insert U flash of FAT32 format. By inserting U flash, it can realize:

- Lead-in and lead-out function of configured parameters
- 1. Check xxx.glm configuration files in the U flash;
- 2. Upload configuration files of HGM9400NXXXX.lgm format to controller;
- 3. Save controller configuration parameters to corresponding HGM9400NXXXX.lgm file;
- 4. Save new configuration file (HGM9400NXXXX.lgm).
- Historical data saving

Historical data saving files are named by year and month. For.dat files named by year-month-day, genset saves data per minute at standby status, at other statuses data are saved per second. If the memory room in the U flash is less than or equal to 200MB, then the earliest month memory files will be deleted.

Historical data files are as below:

Historical data curves can be checked by the historical data analysis funtion of data iGMP6 software.

# 19 INSTALLATION

## 19.1SGE02 EXPANSION MODULE

## 19.1.1 4G ANTENNA PORT

Connect 4G antenna with 4G port of SGE02. Antenna port:  $50\Omega/SMA$  connector.

### 19.1.2 GPS ANTENNA PORT

By using GPS function, connect GPS antenna and GPS port of SGE02.

**NOTE:** GPS antenna needs to be put outdoor, otherwise location information is not correct or users cannot obtain location information.

Antenna port:  $50\Omega/SMA$  receptacle, active antenna.

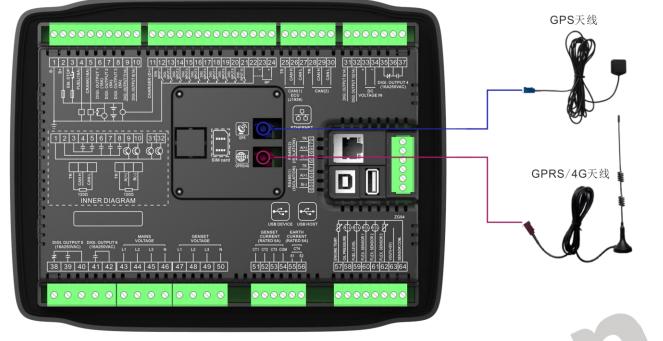

Fig. 13 SGE02 Antenna Connection

### 19.1.3 SIM CARD INSTALLATION

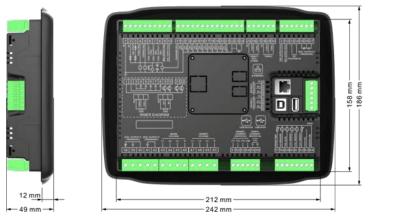

Insert 4G, 3G or 2G SIM card, controller will connect the server by wireless mobile network. NOTE: This module supports Netcom 4G wireless network, applying standard SIM card (dimension 25mmx15mm); if controller displays 🖾 mark, it means SIM card is not in, or SIM card is poor contact.

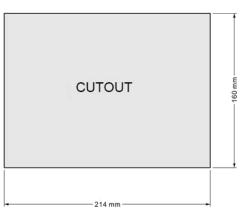

Installation Step is as below.

Fig. 14 SIM Card Installation Method

## **19.2CASE DIMENSIONS AND CUTOUT SIZE**

### Fig. 15 Dimension and Cutout Size

HGM9420N\_HGM9420LT controller can suit for (8~35) VDC battery voltage environment. Battery negative electrode must be connected with the starter shell stably. The wire area connecting controller power B+/B- with negative and positive electrodes of battery mustn't be less than 2.5mm<sup>2</sup>. If floating charger is configured, please firstly connect output wires of charger to battery's positive and negative directly, and then connect wires from battery's positive and negative to controller's positive and negative input ports separately in order to prevent the charger from disturbing the controller's normal working.

- Speed Sensor Input: Speed sensor is the magnetic equipment installed in the engine body to detect flywheel teeth number. The wires used to connect with the controller shall be 2-core shielding wires. The shielding layer shall be connected to No. 23 terminal on the controller, and meanwhile the other terminal shall be hanging in the air. Another two signal wires shall be connected to No.23 and No.24 terminals on the controller. The output voltage of the speed sensor shall be within (1~24) VAC (effective value) in the range of full speed and 12VAC is recommended (at rated speed). As to speed sensor installation, the sensor can firstly be spun to the connection flywheel, then invert 1/3 lap, and finally tighten up the screw on the sensor.
- Output And Expand Relays: All controller outputs are relay contact outputs. If the expansion relay is needed, freewheel diode (relay coil is DC) and resistor and capacitor circuit (relay coil is AC) shall be added to the two ends of the relay coils in order to prevent disturbing the controller or others equipments.
- Alternate Current Input: HGM9420N\_HGM9420LT controller current input must be connected to
  outside current transformer. The secondary side current of the current transformer must be 5A
  and at the same time current transformer phase and input voltage phase must be correct,
  otherwise the collected current and active power may not be correct.
- Withstand Voltage Test: When controller had been installed in control panel, if high voltage test is needed, please disconnect controller's all terminal connections, in order to prevent high voltage into controller and damage it.

**ANOTE 1**: ICOM port must be connected to negative pole of battery.

**ANOTE 2**: When there is load current, transformer's secondary side is prohibited open circuit.

#### 20 SMS MESSAGE ALARM AND REMOTE CONTROL

#### 20.1 SMS MESSAGE ALARM

When controller detects alarms, it will send message automatically to the pre-set telephone numbers. **ANOTE**: All shutdown alarms, trip and stop alarms, trip alarms can send messages to the pre-set telephone numbers. For warning alarms, controller will send messages to the phone according to user configurations.

#### 20.2SMS MESSAGE REMOTE CONTROL

Users send message commands to wireless communication module, then controller will execute related actions based on message commands, and return related execution information. Controller only executes the message commands from its own pre-set phone numbers. Detailed message commands are as below.

No.	Message Command	Message Return Information	Description	
		GENSET ALARM	Genset stop alarm or trip	
			and stop alarm	
		SYSTEM IN STOP MODE	In stop mode, standby	
		GENSET AT REST	status	
		SYSTEM IN MANUAL MODE	In manual mode, standby	
		GENSET AT REST	status	Obtain
1	SMS GENSET	SYSTEM IN AUTO MODE	In auto mode, standby	Genset
1	SING GENGET	GENSET AT REST	status	Status.
		SYSTEM IN STOP MODE	In stop mode, start status	Status.
		GENSET IS RUNNING		
		SYSTEM IN MANUAL MODE	In manual mode, start status	
		GENSET IS RUNNING		
		SYSTEM IN AUTO MODE	In auto mode, start status	
		GENSET IS RUNNING		
			Genset stop alarm or trip	
		GENSET ALARM	and stop alarm	01.1
2	SMS START	STOP MODE NOT START	In stop mode, cannot start	Start
		SMS START OK	In manual mode, is starting	genset.
		AUTO MODE NOT START	In auto mode, cannot start	
3	SMS STOP MODE	SMS STOP OK	Set to stop mode	
4	SMS MANUAL	SMS MANUAL MODE OK	Set to manual mode	
	MODE			
5	SMS AUTO MODE	SMS AUTO MODE OK	Set to auto mode	
6		Return information can be set by	Obtain genset details.	
	SMS DETAIL	software.		

#### Table 19 SMS Message Order List

**ANOTE**: Users shall send commands according to the contents of above table. All letters shall be capital.

**ANOTE**: SMS DETAIL returned detailed information includes: working mode, Mains voltage, Gen voltage, load current, Mains frequency, Gen frequency, active power, apparent power, power factor, battery voltage, D+ voltage, water temperature, oil pressure, fuel level, speed, accumulated running time, genset status, alarm status.

### 21 CONNECTIONS OF CONTROLLER AND J1939 ENGINE

### 21.1CUMMINS ISB/ISBE

Terminals of controller	Connector B	Remark
Aux. output 1	39	Configured to "Fuel Output";
Start relay output	-	Connected with starter coil directly;
Aux. output 2	Expansion 30A relay; providing battery voltage for terminal 01,07,12,13;	Set to "ECU power";

#### Table 21 9-Pin Connector

9 pins connector	Remark				
SAE 11030 shield	CAN communication shielding line				
SAL 31939 Shield	(connected with ECU terminal only);				
CAN(H) SAE J1939 signal	Impedance $120\Omega$ connecting line is				
SAE J 1939 Signal	recommended.				
	Impedance $120\Omega$ connecting line is				
SAE J1939 IELUIN	recommended.				

Engine type: Cummins ISB.

### 21.2CUMMINS QSL9

Suitable for CM850 engine control module.

### Table 22 50-Pin Connector

Terminals of controller	50 pins connector	Remark
Aux. output 1	39	Configured to "Fuel Output";
Start relay output	-	Connected to starter coil directly;

### **Table 23 9-Pin Connector**

Terminals of controller	9 pins connector	Remark
CAN SCR	SAE J1939 shield-E	CAN communication shielding
CAN_OCK	SAE J1939 Shield-E	line(connected with ECU terminal only);
CAN(H)	SAE J1939 signal-C	Using impedance 120Ω connecting line;
CAN(L)	SAE J1939 return-D	Using impedance $120\Omega$ connecting line;

Engine type: Cummins-CM850.

### 21.3CUMMINS QSM11 (IMPORT)

It is suitable for CM570 engine control module. Engine type is QSM11 G1, QSM11 G2.

Table 24 C1 Connector			
Terminals of controller	C1 connector	Remark	
		Configured to "Fuel Output"; External	
Aux. output 1	5&8	expansion relay; at fuel output, make port 5	
		and port 8 of C1 connector connected;	
Start relay output	-	Connected to starter coil directly;	

#### Table 25 3-Pin Data Link Connector

Terminals of controller	3 pins data link connector	Remark
CAN_SCR	С	CAN communication shielding line (connected with ECU terminal only);
CAN(H)	A	Using impedance 120Ω connecting line;
CAN(L)	В	Using impedance $120\Omega$ connecting line;

Engine type: Cummins ISB.

### 21.4CUMMINS QSX15-CM570

It is suitable for CM570 engine control module. Engine type is QSX15 etc.

### Table 26 50-Pin Connector

Terminals of controller	50 pins co	onnector	Remark
Aux. output 1	38		Injection switch; Configured to "Fuel Output";
Start relay output	-		Connected to starter coil directly;

#### Table 27 9-Pin Connector

Terminals of controller	9 pins connector	Remark
CAN SCR	SAE J1939 shield-E	CAN communication shielding
CAN_SON	SAE J 1939 Shield-E	line(connected with ECU terminal only);
CAN(H)	SAE J1939 signal-C	Using impedance $120\Omega$ connecting line;
CAN(L)	SAE J1939 return-D	Using impedance $120\Omega$ connecting line;

Engine type: Cummins QSX15-CM570.

#### 21.5CUMMINS GCS-MODBUS

It is suitable for GCS engine control module. Use RS485-MODBUS to read information of engine. Engine types are QSX15, QST30, QSK23/45/60/78 and so on.

Table 28 D-SUB Connector 06			
Terminals of controller	D-SUB connector 06	Remark	
Aux. output 1	5&8	Configured to "Fuel Output"; Outside expansion relay; at fuel output, make port 05	
		and port 08 of connector 06 connected.	
Start relay output	-	Connected to starter coil directly;	

#### Table 29 D-SUB Connector 06

Terminals of controller	D-SUB connector 06	Remark
RS485 GND	20	CAN communication shielding line (connected with ECU terminal only);
RS485+	21	Using impedance $120\Omega$ connecting line;
RS485-	18	Using impedance $120\Omega$ connecting line;

Engine type: Cummins-QSK-MODBUS, Cummins- QST-MODBUS, Cummins-QSX-MODBUS.

#### 21.6CUMMINS QSM11

Aux. output 1	45	
Start relay output	-	Connected to starter coil directly;
Aux. output 2	16&41	Set as idling speed control; (N/C) output; by
		expansion relay, make 16&41 close as the
		controller is running.
Aux. output 3	19&41	Set as pulse speed raising control; (N/O)
		output; by expansion relay, make 19&41
		close for 1s as the controller is entering
		warming-up time.
CAN_SCR	-	CAN communication shielding line
CAN(H)	1	Using impedance $120\Omega$ connecting line;
CAN(L)	21	Using impedance 120Ω connecting line;
Engine type: Common 119	39	·

Engine type: Common J1939.

### 21.8DETROIT DIESEL DDEC III/IV

### Table 32 Engine CAN Port

Terminals of controller	CAN port of engine	Remark
Aux. output 1	Expansion 30A relay, proving battery voltage for ECU;	Configured to "Fuel Output";
Start relay output	-	Connected to starter coil directly;
CAN_SCR	-	CAN communication shielding line
CAN(H)	CAN(H)	Using impedance $120\Omega$ connecting line;
CAN(L)	CAN(L)	Using impedance $120\Omega$ connecting line;

Engine type: Common J1939.

# 21.9DEUTZ EMR2

Table	33 F	Connector
-------	------	-----------

Terminals of controller	F connector	Remark
	Expansion 30A rela	r, Configured to "Fuel Output";
Aux. output 1	proving battery voltage for	r
	terminal 14; Fuse is 16A.	
Start relay output	-	Connected to starter coil directly;
-	1	Connected to battery negative;
CAN_SCR	-	CAN communication shielding line
	10	Impedance $120\Omega$ connecting line is
CAN(H)	12	recommended.
	10	Impedance 120Ω connecting line is
CAN(L)	13	recommended.

Engine type: Volvo EDC4.

# 21.10 JOHN DEERE

### Table 34 21-Pin Connector

Terminals of controller	21 pins connector	Remark
Aux. output 1	G, J	Configured to "Fuel Output";
Start relay output	D	
CAN_SCR	-	CAN communication shielding line
CAN(H)	V	Using impedance 120Ω connecting line;
CAN(L)	U	Using impedance 120Ω connecting line;

Engine type: John Deere.

#### 21.11 MTU MDEC

Suitable for MTU engines 2000 series, 4000series.

Table 35 X1 Connector			
Terminals of controller	X1 Connector	Remark	
Aux. output 1	BE1	Configured to "Fuel Output";	
Start relay output	BE9		
CAN_SCR	E	CAN communication shielding line	
CAN(H)	G	Using impedance $120\Omega$ connecting line;	
CAN(L)	F	Using impedance $120\Omega$ connecting line;	

Engine type: mtu-MDEC-303.

#### 21.12 MTU ADEC(SMART MODULE)

It is suitable for MTU engine with ADEC (ECU8) and SMART module.

#### Table 36 ADEC (X1 Connector)

Terminals of controller	ADEC (X1port)	Remark
Aux. output 1	X1 10	Configured to "Fuel Output";
		X1 9 shall connect negative of battery.
Start relay output	X1 34	X1 33 shall connect negative of battery.

Table 37 SMART (X4 Connector)		
Terminals of controller	SAM (X23 port)	Remark
CAN_SCR	X4 3	CAN communication shielding line
CAN(H)	X4 1	Using impedance 120Ω connecting line;
CAN(L)	X4 2	Using impedance $120\Omega$ connecting line;

Engine type: mtu-ADEC.

## 21.13 MTU ADEC (SAM MODULE)

Suitable for MTU engine with ADEC (ECU7) and SAM module.

### Table 38 ADEC (X1 Port)

Terminals of controller	ADEC (X1 port)	Remark
Aux. output 1	X1 43	Configured to "Fuel Output";
		X1 28 shall connect negative of battery.
Start relay output	X1 37	X1 22 shall connect negative of battery.

#### Table 39 SAM (X23 Port)

Terminals of controller	SAM (X23 Port)	Remark
CAN_SCR	X23 3	CAN communication shielding line
CAN(H)	X23 2	Using impedance $120\Omega$ connecting line;
CAN(L)	X23 1	Using impedance $120\Omega$ connecting line;

Engine type: Common J1939.

## 21.14 PERKINS

It is suitable for ADEM3/ ADEM4 engine control module. Engine type is 2306, 2506, 1106, and 2806.

#### **Table 40 Connector**

Terminals of controller	Connector	Remark
Aux. output 1	1,10,15,33,34	Configured to "Fuel Output";
Start relay output	-	Connected to starter coil directly;
CAN_SCR	-	CAN communication shielding line
CAN(H)	31	Using impedance $120\Omega$ connecting line;
CAN(L)	32	Using impedance $120\Omega$ connecting line;

Engine type: Perkins.

### 21.15 SCANIA

It is suitable for S6 engine control module. Engine type is DC9, DC12, and DC16.

### Table 41 B1 Connector

Terminals of controller	B1 connector	Remark
Aux. output 1	3	Configured to "Fuel Output";
Start relay output	-	Connected to starter coil directly;
CAN_SCR	-	CAN communication shielding line
CAN(H)	9	Using impedance 120Ω connecting line;
CAN(L)	10	Using impedance $120\Omega$ connecting line;

Engine type: Scania.

### 21.16 VOLVO EDC3

#### Suitable engine control mode is TAD1240, TAD1241, and TAD1242.

#### Table 42 "Stand Alone" Connector

Terminals of controller	"Stand alone" connector	Remark
Aux. output 1	Н	Configured to "Fuel Output";
Start relay output	E	
Aux. output 2	Р	Set to "ECU power";

#### Table 43 "Data Bus" Connector

Terminals of controller	"Data bus" connector	Remark
CAN_SCR	-	CAN communication shielding line
CAN(H)	1	Using impedance $120\Omega$ connecting line;
CAN(L)	2	Using impedance $120\Omega$ connecting line;

Engine type: Volvo.

**ANOTE:** When this engine type is selected, preheating time should be set to at least 3 seconds.

### 21.17 VOLVO EDC4

Suitable engine types are TD520, TAD520 (optional), TD720, TAD720 (optional), TAD721, TAD722, and TAD732.

Table 44 Connector			
Terminals of controller	Connector	Remark	
	Expansion 30A relay,	Configured to "Fuel Output";	
Aux. output 1	providing battery voltage for		
	terminal 14. Fuse is 16A.		
Start relay output	-	Connected to starter coil directly;	
	1	Connected to negative of battery;	
CAN_SCR	-	CAN communication shielding line;	
CAN(H)	12	Using impedance $120\Omega$ connecting line;	
CAN(L)	13	Using impedance $120\Omega$ connecting line;	

Engine type: Volvo EDC4.

#### 21.18 VOLVO-EMS2

Volvo Engine types are TAD734, TAD940, TAD941, TAD1640, TAD1641, and TAD1642.

Table 45 Engine CAN Fort		
Terminals of controller	Engine's CAN port	Remark
Aux. output 1	6	Set output 1 to "ECU stop";
Aux. output 2	5	Set output 2 to "ECU power";
	3	Power negative;
	4	Power passive;
CAN_SCR		CAN communication shielding line;
CAN(H)	1(Hi)	Using impedance $120\Omega$ connecting line;
CAN(L)	2(Lo)	Using impedance $120\Omega$ connecting line;

Table 45 Engine CAN Port

Engine type: Volvo-EMS2.

**ANOTE:** When this engine type is selected, preheating time should be set to at least 3 seconds.

# **21.19 YUCHAI**

It is suitable for BOSCH common rail engine.

Table 46 Engine 42-Pin Port			
Terminals of controller	Engine 42 pins port	Remark	
Aux. output 1	1.40	Configured to "Fuel Output";	
		Connected to engine ignition lock;	
Start relay output	-	Connected to starter coil directly;	
CAN_SCR	-	CAN communication shielding line;	
CAN(H)	1.35	Using impedance 120Ω connecting line;	
CAN(L)	1.34	Using impedance $120\Omega$ connecting line;	

Table 47 Engine 2-Pin

Battery	Engine 2 pins	Remark	
Battery negative	1	Wire diameter 2.5mm <sup>2</sup> ;	
Battery positive	2	Wire diameter 2.5mm <sup>2</sup> ;	

#### **21.20 WEICHAI**

Engine type: BOSCH.					
21.20 WEICHAI					
It is suitable for Weichai BOSCH common rail engine.					
Table 48 Engine Port					
Terminals of controller	Engine port	Remark			
Aux. output 1	1.40	Configured to "Fuel Output";			
		Connected to engine ignition lock;			
Start relay output	1.61				
CAN_SCR		CAN communication shielding line;			
CAN(H)	1.35	Using impedance $120\Omega$ connecting line;			
CAN(L)	1.34	Using impedance $120\Omega$ connecting line;			

# Table 48 Engine Port

Engine type: GTSC1.

**ANOTE:** If there is any question of connection between controller and ECU communication, please feel free to contact SmartGen's service.
